

## Model 1 - Desktop Swab Results

1. How do the genetic variants of *E. coli* present in the initial sample compare to those found in the petri dish without triclosan and the petri dish with triclosan? Be detailed in your response.

- a. What most likely happened to the other variations of *E. coli* from the original sample on the dish with triclosan?

- b. Based on this information, What characteristic does Variation S have that the others do not?

2. Suppose another desk was cleaned with triclosan right before taking a sample. Would you expect to see any living *E. coli* in the sample when you swabbed/tested the desk for bacteria? Support your answer using evidence from the model.

3. It is likely that the bacteria in the new sample are not the same bacteria that were on the desk 9-months ago. Based on this information, what characteristics did earlier generations have, and what trait do you expect the next generations to have? Why? (Hint: This back to our last unit on Heredity!)

4. Propose an explanation for the presence of only variant S on the desktop after so much time.
