Tims, 1950 **Decision Policies for Production Networks** Dieter Armbruster, Karl G. Kempf, 2012-03-14 The financial results of any manufacturing company can be dramatically impacted by the repetitive decisions required to control a complex production network be it a network of machines in a factory a network of factories in a company or a network of companies in a supply chain Decision Policies for Production Networks presents recent convergent research on developing policies for operating production networks including details of practical control and decision techniques which can be applied to improve the effectiveness and economic efficiency of production networks worldwide Researchers and practitioners come together to explore a wide variety of approaches to a range of topics including WIP and equipment management policies Material release policies Machine factory and supply chain network policies for delivery in the face of supply and demand variability and Conflicts between complex production network models and their controlling policies Case studies and relevant mathematical techniques are included to support and explain techniques such as heuristics global and hierarchical optimization control theory and filtering approaches related to complex systems or traffic flows Decision Policies for Production Networks acts as handbook for researchers and practitioners alike providing findings and information which can be applied to develop methods and advance further research across production networks **Improving supply chain performance through an integrated planning concept** Hermann Kraxenberger, 2007-12-19 Inhaltsangabe Problem statement In recent years enterprises are facing a dramatic change in the way that they do business Rapid advances in technology and increasing regulatory freedom have changed the rules and nature of competition Enterprises are now competing globally and traditional barriers between industries are breaking down To cope with these changes and achieve superior performance business leaders are moving towards new business paradigms that allow their companies to work more closely with their traditional and new business partners to adapt to the rapidly changing marketplace This improved integration is the very essence of Supply Chain Management Supply chain leaders are reconsidering the linkages not only between functions within their own company but with organizations up and down the supply chain Supply chain networks are becoming more efficient and more responsive to the need of increasingly demanding customers driven by competitive pressures and supported by developments in information technology Hereby integrated supply chain planning approaches play a major role in efficiently matching demand of the market place with supply capabilities of inter organisational networks Driven by major success stories of supply chain performance improvements almost every company is nowadays considering the integration of its supply chain entities to yield better business performance Two of these shining examples are Hewlett Packard that saved 25% of their distribution costs by optimizing inventories and transports as well as IBM Personal Computers that achieved a cash flow release of 750 Mio US by reengineering planning processes for direct materials and finished products These impressive gains

show the potential of coordinating organizational entities and integrating information flows and planning efforts along a supply chain Which company can afford not to present such substantial gains in improving competitiveness However this picture may be shattered by looking behind the shining curtain of well marketed supply chain management concepts to the real state in industry According to a research study of Mc Kinsey Company only 32% of multinational companies running major supply chain projects claim that their performance has significantly increased Furthermore Gartner Group states that more than 70% of all advanced planning system implementations supporting the supply chain management concept have an extensive cost
