The Imperial Mode of Living Markus Wissen, Ulrich Brand, 2021-01-26 With the concept of the Imperial Mode of Living Brand and Wissen highlight the fact that capitalism implies uneven development as well as a constant and accelerating universalisation of a Western mode of production and living The logic of liberal markets since the 19th Century and especially since World War II has been inscribed into everyday practices that are usually unconsciously reproduced The authors show that they are a main driver of the ecological crisis and economic and political instability The

Imperial Mode of Living implies that people's everyday practices including individual and societal orientations as well as identities rely heavily on the unlimited appropriation of resources a disproportionate claim on global and local ecosystems and sinks and cheap labour from elsewhere This availability of commodities is largely organised through the world market backed by military force and or the asymmetric relations of forces as they have been inscribed in international institutions Moreover the Imperial Mode of Living implies asymmetrical social relations along class gender and race within the respective countries Here too it is driven by the capitalist accumulation imperative growth oriented state policies and status consumption The concrete production conditions of commodities are rendered invisible in the places where the commodities are consumed The imperialist world order is normalized through the mode of production and living

Aviation and Tourism Anne Graham, Andreas Papatheodorou, Peter Forsyth, 2016-04-08 Transport is an essential element of tourism providing the vital link between the tourist generating areas and destinations Good accessibility which is determined by the transport services provided is a fundamental condition for the development of any tourist destination Moreover the transport industry can be a major beneficiary of tourism because of the additional passenger demand that may be generated Aviation is an increasingly important mode of transport for tourism markets Whilst geography has meant that in modern times air travel has always been the dominant mode for long distance travel and much international tourism moves towards deregulation and in particular the emergence of the low cost carrier sector have also increased aviation's significance for short and medium haul tourism trips Thus developments in aviation can have very major implications for many leisure and business tourism markets However the characteristics and needs of leisure travellers are generally so very different from business travellers that this necessitates a separate consideration of these markets if a detailed understanding of the relationship with aviation is to be gained In spite of the obvious closeness between the aviation and tourism industries there are very few specialist texts on this subject Most tourism focused books consider aviation as just one component of the tourism industry which needs to be discussed whereas aviation specialist texts rarely concentrate on just leisure travel In addition there is very little literature that gives a detailed appreciation of the complexities and potential conflicts associated with the development of coherent and effective aviation and tourism policies Therefore it is the aim of this book to fill this important gap which exists with a comprehensive in depth study of the relationship between aviation and leisure travel The book deals exclusively with issues related to the relationship between aviation and leisure travel It does this with an analysis of the theoretical concepts relevant to the subject area combined with a detailed investigation of current practice within the aviation and tourism industries Each chapter is illustrated with case study material that will reinforce the understanding of the issues that are being examined
