Ecologies of Inception Simone Ferracina, 2022-05-30 Responding to increasing levels of planetary pollution waste generation carbon dioxide emission and environmental collapse Ecologies of Inception re thinks potentiality an object s ability to change in architecture and design The book problematizes

the still prevailing modern paradigm of design practice the technical tabula rasa a tendency to begin from scratch and use raw amorphous and obedient materials that can be easily and effectively manipulated facilitating a seamless and faithful embodiment of intentions Instead the philosophy of design developed in the text prompts through a variety of case studies thinkers and disciplines a collective reconsideration of value dissociating it from the projects and signatures of any one author or generation Whereas the merits of up cycling and circular design are canonically defined vis vis status quo economic and socio cultural orthodoxies this project unpacks the theoretical assumptions that underpin these practices showing that they perpetuate the same biases and exclusions that generate waste in the first place As an alternative the book introduces a nodal and exaptive paradigm for design a conceptual and methodological toolset for engaging the durational and anthropogenic materiality of the third millennium and for radically prioritizing practices of maintenance reuse care and co option This approach which is inspired by and builds upon evolutionary biology technological disobedience queer use adaptive reuse experimental preservation and improvisational practices such as collage adhocism bricolage and kit bashing refuses to reduce pre existing material substrates to abstract lists of properties or featureless lumps encountering them on their own terms as situated individuals and co authors Ecologies of Inception will appeal to undergraduate and postgraduate students educators and professional architects and designers interested in sustainable design and seeking to develop conceptual and design tools commensurate with the magnitude and urgency of the climate emergency
