Bringing together all the emerging social science research technologies in one place, The Handbook of Emergent Technologies in Social Research offers comprehensive and up-to-date thinking on emerging technologies and addresses their impact on research methods and in turn how new technologies lead to new research questions and areas of inquiry. The Handbook is organized into five sections covering internet technologies, emergent data collection methods, audio, visual, mobile, and geospatial technologies, and technology's impact on studying social life in natural settings. All after taking a look at emergent technologies from a broad social research context. Many of the twenty-nine chapters provide a commentary on and summary of specific technologies like global surveys on the internet, mobile phones, data mining, and remote sensing, with a central focus on the most effective ways to use them. Others discuss the ethical and moral implications, especially issues of privacy and confidentiality, and collaborations across disciplines and outside the academy.
