Empiricism And Darwins Science The Western Ontario Series In Philosophy Of Science:

Empiricism and Darwin's Science F. Wilson, 2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin. My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember. My parents were both looking forward to holding a final copy of this book. I only regret that my mother did not live long enough to see its completion. I must also thank the publishers and their staff. They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt. I would further like to thank the following authors and publishers for permission to use their work: R C Lewontin *The Genetic Basis of Evolutionary Change* Figure 1 p 14 1964 Columbia University Press reprinted here by kind permission of the author and publisher F Wilson Goudge's *Contribution to the Philosophy of Science* in L W Sumner J G Slater and F Wilson eds *Pragmatism and Purpose: Essays in Honour of T A Goudge* 1964 University of Toronto Press reproduced here in part by kind permission of all the editors and the publisher *The University of Western Ontario Series in Philosophy of Science*, 1995 [Philosophy and Geometry](#) L. Magnani, 2012-12-06 Philosophers have studied geometry since ancient times. Geometrical knowledge has often played the role of a laboratory for the philosopher's conceptual experiments dedicated to the ideation of powerful theories of knowledge. Lorenzo Magnani's new book *Philosophy and Geometry* illustrates the rich intrigue of this fascinating story of human knowledge providing a new analysis of the ideas of many scholars including Plato Proclus Kant and Poincaré and discussing conventionalist and neopositivist perspectives and the problem of the origins of geometry. The book also ties together the concerns of philosophers of science and cognitive scientists showing for example the connections between geometrical reasoning and cognition as well as the results of recent logical and computational models of geometrical reasoning. All the topics are dealt with using a novel combination of both historical and contemporary perspectives. *Philosophy and Geometry* is a valuable contribution to the renaissance of research in the field [The Art of the Intelligible](#) J. Bell, 2012-12-06 A compact survey at the elementary level of some of the most important concepts of mathematics. Attention is paid to their technical features historical development and broader philosophical significance. Each of the various branches of mathematics is discussed separately but their interdependence is emphasised throughout. Certain topics such as Greek mathematics abstract algebra set theory geometry and the philosophy of mathematics are discussed in detail. Appendices outline from scratch the proofs of two of the most celebrated limitative results of mathematics the insolubility of the problem of doubling the cube and trisecting an arbitrary angle and the Gödel incompleteness theorems. Additional appendices contain brief accounts of smooth infinitesimal analysis a new approach to the use of infinitesimals in the calculus and of the philosophical thought of the great 20th century mathematician Hermann Weyl. Readership: Students and teachers of

mathematics science and philosophy The greater part of the book can be read and enjoyed by anyone possessing a good high school mathematics background *Witches, Scientists, Philosophers: Essays and Lectures* Robert E. Butts, 2000-10-31

Robert E Butts 1928 1997 was a philosopher and historian of science whose central concerns were the distinction between the rational and the irrational He viewed scientific rationality as our major defence against the various conditions that encourage witch hunts and similar outbursts of irrationality with all their attendant pain and terror Butts saw himself as a pragmatic realist combining what he took to be the best aspects of logical empiricism with a historically informed pragmatism deeply appreciative of the methods of science trying to describe a kind of rationality essential in the struggle to preserve human values This volume gathers previously unpublished essays and lectures with some previously published thematically related essays It includes essays and lectures on philosophical aspects of the European witch hunt on scientific rationality and methodology and on the relationships between science and philosophy exhibited in the writings of such historically significant figures as Leibniz D Alembert Hume Kant Carnap and Kuhn **Experience, Reality, and Scientific**

Explanation Maria Carla Galavotti, A. Pagnini, 2013-03-09 The papers collected here comprise the proceedings of a Workshop in honor of Merrilee and Wes Salmon held in Florence on May 17 18 1996 The aim of the meeting was to pay homage to these two American scholars whose contact with Italian and European Universities and Institutes had a major influence on Continental thought in the field of epistemology and probability In fact Merrilee and Wes spent various periods lecturing at the Universities of Bologna Florence Rome Trieste Catania and Pisa as well as in the University of Constance where they helped to build a strong cultural bridge with the Pittsburgh Center for the Philosophy of Science The Florence Center for the History and Philosophy of Science is particularly thankful to the Salmons for their ongoing cooperation and frequent visits We must not forget that Wes Salmon was in the Florence Center and at the Philosophy Department of Florence as visiting scholar on many occasions and that he made important contributions which have later appeared in Italian journals such as *Iride* and *Rivista di filosofia* Merrilee was a speaker at the Conference on Genetics Linguistics and Archaeology May 20 24 1991 organized by the Florence Center Both Wes and Merrilee often enlivened the arguments of the initiatives they took part in Knowledge, Cause, and Abstract Objects C. Cheyne, 2013-03-14 According to platonists entities such as numbers sets propositions and properties are abstract objects But abstract objects lack causal powers and a location in space and time so how could we ever come to know of the existence of such impotent and remote objects In *Knowledge Cause and Abstract Objects* Colin Cheyne presents the first systematic and detailed account of this epistemological objection to the platonist doctrine that abstract objects exist and can be known Since mathematics has such a central role in the acquisition of scientific knowledge he concentrates on mathematical platonism He also concentrates on our knowledge of what exists and argues for a causal constraint on such existential knowledge Finally he exposes the weaknesses of recent attempts by platonists to account for our supposed platonic knowledge This book will be of particular

interest to researchers and advanced students of epistemology and of the philosophy of mathematics and science It will also be of interest to all philosophers with a general interest in metaphysics and ontology

The Modal Interpretation of Quantum Mechanics Dennis Dieks, Pieter E. Vermaas, 2012-12-06 According to the modal interpretation the standard mathematical framework of quantum mechanics specifies the physical magnitudes of a system which have definite values Probabilities are assigned to the possible values that these magnitudes may adopt The interpretation is thus concerned with physical properties rather than with measurement results it is a realistic interpretation in the sense of scientific realism One of the notable achievements of this interpretation is that it dissolves the notorious measurement problem The papers collected here together with the introduction and concluding critical appraisal explain the various forms of the modal interpretation survey its achievements and discuss those problems that have yet to be solved Audience Philosophers of science theoretical physicists and graduate students in these disciplines

Experiencing Nature P. Theerman, Karen Hunger Parshall, 1997-04-30 This volume honoring the renowned historian of science Allen G Debus explores ideas of science experiences of nature from within a historiographical tradition that Debus has done much to define As his work shows the sciences do not develop exclusively as a result of a progressive and inexorable logic of discovery A wide variety of extra scientific factors deriving from changing intellectual contexts and differing social milieus play crucial roles in the overall development of scientific thought These essays represent case studies in a broad range of scientific settings from sixteenth century astronomy and medicine through nineteenth century biology and mathematics to the social sciences in the twentieth century that show the impact of both social settings and the cross fertilization of ideas on the formation of science Aimed at a general audience interested in the history of science this book closes with Debus's personal perspective on the development of the field Audience This book will appeal especially to historians of science of chemistry and of medicine

Consciousness and Intentionality: Models and Modalities of Attribution D. Fisette, 2013-03-14 Philosophy of mind has been one of the most active fields in philosophy for the past three decades One of the most significant factors in the development of this discipline has been the emergence of cognitive science and the interest philosophers have taken in the empirical study of mind Another equally important factor has been the naturalistic turn brought about by W V Quine His proposal that normative epistemology be replaced by empirical psychology marked a radical departure from the Fregean anti psychologism and apriorism that had characterized much of the analytic tradition in philosophy But while Quine's program of naturalization called the attention of philosophers to empirical psychology his conception of psychology was inspired by an austere behaviorism which shunned the mentalism of intentional psychology in the Brentanian and phenomenological tradition Thus while agreeing with Brentano that the intentional idiom could not be reduced to that of the natural sciences Quine argued that it is of a piece with the indeterminacy of translation Most contributors of this collection share the cognitivist stance and believe that the mind needs to be explained rather than eliminated Three main questions are actually

confronting current philosophers of mind each addressed by one or another of the contributors to the present collection

Existence and Explanation W. Spohn,B.C. van Fraassen,B. Skyrms,2012-12-06 This collection of essays is dedicated to Joe Karel Lambert The contributors are all personally affected to Joe in some way or other but they are definitely not the only ones Whatever excuses there are there are some the editors apologize to whomever they have neglected But even so the collection displays how influential Karel Lambert has been personally and through his teaching and his writings The display is in alphabetical order with one exception Bas van Fraassen being about the earliest student of Karel Lambert opens the collection with some reminiscences Naturally one of the focal points of this volume is Lambert s logical thinking and or freed of ontological thinking Free logic is intimately connected with description theory Bas van Fraassen gives a survey of the development of the area and Charles Daniels points to difficulties with definite descriptions in modal contexts and stories Peter Woodruff addresses the relation between free logic and supervaluation semantics presenting a novel condition which recovers desirable metatheoretic properties for free logic under that semantics Terence Parsons shows how free logic can be utilized in interpreting sentences as purporting to denote events true ones succeed and false ones fail and how this helps to understand natural language **Euclid's Heritage. Is Space Three-Dimensional?** P. Janich,2013-03-09 We live in a space we get about in it We also quantify it we think of it as having dimensions Ever since Euclid s ancient geometry we have thought of bodies occupying parts of this space including our own bodies the space of our practical orientations our moving abouts as having three dimensions Bodies have volume specified by measures of length breadth and height But how do we know that the space we live in has just these three dimensions It is theoretically possible that some spaces might exist that are not correctly described by Euclidean geometry After all there are the non Euclidian geometries descriptions of spaces not conforming to the axioms and theorems of Euclid s geometry As one might expect there is a history of philosophers attempts to prove that space is three dimensional The present volume surveys these attempts from Aristotle through Leibniz and Kant to more recent philosophy As you will learn the historical theories are rife with terminology with language already tainted by the assumed but by no means obvious clarity of terms like dimension line point and others Prior to that language there are actions ways of getting around in the world building things being interested in things in the more specific case of dimensionality cutting things It is to these actions that we must eventually appeal if we are to understand how science is grounded Laws and Other Worlds Fred Wilson,1986-10-31 **Historical Abstracts** ,1993 **Knowledge and Reality** P. Parrini,2013-11-11 XIV The stability of a philosophical construction will depend not only upon the solidity of the blocks of the pillars and architraves that make it up but also upon the way in which all these parts are connected Of course it will not be possible to argue for every single part of a philosophical building to do so would mean to embark in a virtually endless enterprise Accordingly some of the parts of a philosophical building will have to be taken from the literature on the subject as

ready made or semi finished elements while others will be argued for in the course of building This is what happened in my work too In some cases for instance in the case of epistemic relativism my concern was to illustrate theses which I believed to be sufficiently consolidated rather than to argue for them In other cases where I was directly engaged in building the theory that I want to formulate I did exactly the opposite This is what I have tried to achieve for example for those proper architraves of my construction viz the connection between scepticism and metaphysical realism and the thesis of the nonnative value of the fundamental epistemological notions truth objectivity and rationality

,1993 Kant and Contemporary Epistemology P. Parrini,2012-12-06 From the mid 1960s after the important works by J Hintikka S Kerner W Sellars and P F Strawson there has been a marked revival of Kantian epistemological thought Against this background featuring fruitful exchange between historical research and theoretical prospects the main point of the book is the discussion of Kantian theory of scientific knowledge from the perspective of present day analytical philosophy and philosophy of empirical and mathematical sciences The main topics are the problem of a priori knowledge in logic mathematics and physics the distinction between analytic and synthetic judgments the constitution of physical objectivity and the questions of realism and truth the Kantian conception of time causal laws and induction the relations between Kantian epistemological thought relativity theory quantum theory and some recent developments of philosophy of science The book is addressed to research workers specialists and scholars in the fields of epistemology philosophy of science and history of philosophy *Choice* ,1992
