Evolutionary Architecture Nature As A Basis For Design:

Evolutionary Architecture Eugene Tsui, 1999-04 This book uncovers the guiding principles behind Tsui's evolutionary approach to explore the many design lessons that can be learned from nature and share the impressive results of their application to architectural projects

The Art of Artificial Evolution Juan J. Romero, 2008 Art is the Queen of all sciences communicating knowledge to all the generations of the world Leonardo da Vinci Artistic behavior is one of the most valued qualities of the human mind Although artistic manifestations vary from culture to culture dedication to artistic tasks is common to all In other words artistic behavior is a universal trait of the human species The current Western definition of art is relatively new However a dedication to artistic endeavors such as the embellishment of tools body ornamentation or gathering of unusual arguably aesthetic objects can be traced back to the origins of humanity That is art is ever present in human history and prehistory Art and sciences share along and during relationship The best known example of the exploration of this relationship is probably the work of Leonardo da Vinci Somewhere in the 19th century art and science grew apart but the cross transfer of concepts between the two domains continued to exist Currently albeit the need for specialization there is a growing interest in the exploration of the connections between art and science Focusing on computer science it is interesting to notice that early pioneers of this discipline such as Ada Byron and Alan Turing showed an interest in using computational devices for art making purposes Oddly in spite of this early interest and the ubiquity of art it has received relatively little attention from the computer science community in general and more surprisingly from the artificial intelligence community

The Evolutionary Bases of Consumption Gad Saad, 2007 Publisher description **EDRA40** Environmental Design Research Association. Conference, 2009

New Organic Architecture David Pearson, 2001 New Organic Architecture is a manifesto for building in a way that is both aesthetically pleasing and kinder to the environment It illuminates key themes of organic architects their sources of inspiration the roots and concepts behind the style and the environmental challenges to be met The organic approach to architecture has an illustrious history from Celtic design Art Nouveau Arts and Crafts to the work of Antoni Gaudí and Frank Lloyd Wright Today there is a response to a new age of information and ecology architects are seeking to change the relationship between buildings and the natural environment In the first part of his book David Pearson provides a history and assessment of organic architecture The second part comprises statements from thirty architects from around the world whose work is based on natural or curvilinear forms rather than the straight line geometrics of modernism Each statement is accompanied by full color illustrations of one or several of the architects' built projects

Biomimetic Design Method for Innovation and Sustainability Yael Helfman Cohen, Yoram Reich, 2016-07-01 Presenting a novel biomimetic design method for transferring design solutions from nature to technology this book focuses on structure function patterns in nature and advanced modeling tools derived from TRIZ the theory of inventive problem solving The book includes an extensive literature review on biomimicry as an engine of both innovation

and sustainability and discusses in detail the biomimetic design process current biomimetic design methods and tools The structural biomimetic design method for innovation and sustainability put forward in this text encompasses 1 the research method and rationale used to develop and validate this new design method 2 the suggested design algorithm and tools including the Find structure database structure function patterns and ideality patterns and 3 analyses of four case studies describing how to use the proposed method This book offers an essential resource for designers who wish to use nature as a source of inspiration and knowledge innovators and sustainability experts and scientists and researchers amongst others

Evolutionary Psychology in the Business Sciences Gad Saad, 2011-07-09 All individuals who operate in the business sphere whether as consumers employers employees entrepreneurs or financial traders to name a few constituents share a common biological heritage and are defined by a universal human nature As such it is surprising that so few business scholars have incorporated biological and evolutionary informed theories within their conceptual toolboxes This edited book addresses this lacuna by culling chapters at the intersection of the evolutionary behavioral sciences and specific business contexts including in marketing consumer behavior advertising innovation and creativity intertemporal choice negotiations competition and cooperation in organizational settings sex differences in workplace patterns executive leadership business ethics store design behavioral decision making and electronic communication To reword the famous aphorism of T G Dobzhansky nothing in business makes sense except in the light of evolution *Niche Tactics* Caroline O'Donnell, 2015-04-10 *Niche Tactics* aligns architecture's relationship with site with its ecological analogue the relationship between an organism and its environment Bracketed between texts on giraffe morphology ecological perception ugliness and hopeful monsters architectural case studies investigate historical moments when relationships between architecture and site were productively intertwined from the anomalous city designs of Francesco de Marchi in the sixteenth century to Le Corbusier's near eradication of context in his Plan Voisin in the twentieth century to the more recent contextualist movements Extensively illustrated with 140 drawings and photographs *Niche Tactics* considers how attention to site might create a generative language for architecture today *The SAGE Handbook of Environment and Society* Jules Pretty, Andy Ball, Ted Benton, Julia Guivant, David R Lee, David Orr, Max Pfeffer, Professor Hugh Ward, 2007-10-30 A monumental and timely contribution to scholarship on society and environments The handbook makes it easy and compelling for anyone to learn about that scholarship in its full manifestations and as represented by some of the most highly respected researchers and thinkers in the English speaking world It is wide reaching in scope and far reaching in its implications for public and private action a definite must for serious researchers and their libraries Bonnie J McCay Rutgers University This is the desert island book for anyone interested in the relationship between society and the environment The editors have assembled a masterful collection of contributions on every conceivable dimension of environmental thinking in the social sciences and humanities No library should be without it Robyn Eckersley University of Melbourne *The SAGE Handbook of Environment and Society*

focuses on the interactions between people societies and economies and the state of nature and the environment Editorially integrated but written from multi disciplinary perspectives it is organised in seven sections Environmental thought past and present Valuing the environment Knowledges and knowing Political economy of environmental change Environmental technologies Redesigning natures Institutions and policies for influencing the environment Key themes include locations where the environment society relation is most acute where for example there are few natural resources or where industrialization is unregulated the discussion of these issues at different scales local regional national and global the cost of damage to resources and the relation between principal actors in the environment society nexus Aimed at an international audience of academics research students researchers practitioners and policy makers The SAGE Handbook of Environment and Society presents readers in social science and natural science with a manual of the past present and future of environment society links

The Interdisciplinary Science of Consumption Stephanie D. Preston, Morten L. Kringelbach, Brian Knutson, 2014-08-08 Scholars from psychology neuroscience economics animal behavior and evolution describe the latest research on the causes and consequences of overconsumption Our drive to consume our desire for food clothing smart phones and megahomes evolved from our ancestors drive to survive But the psychological and neural processes that originally evolved to guide mammals toward resources that are necessary but scarce may mislead us in modern conditions of material abundance Such phenomena as

obesity financial bubbles hoarding and shopping sprees suggest a mismatch between our instinct to consume and our current environment This volume brings together research from psychology neuroscience economics marketing animal behavior and evolution to explore the causes and consequences of consumption Contributors consider such topics as how animal food storing informs human consumption the downside of evolved fast and frugal rules for eating how future discounting and the draw toward immediate rewards influence food consumption addiction and our ability to save overconsumption as social display and the policy implications of consumption science Taken together the chapters make the case for an emerging interdisciplinary science of consumption that reflects commonalities across species domains and fields of inquiry By carefully comparing mechanisms that underlie seemingly disparate outcomes we can achieve a unified understanding of consumption that could benefit both science and society

Urban Sustainability Through Environmental Design Kevin Thwaites,Sergio Porta,Ombretta Romice,Mark

Greaves,2007-12-06 What can architects landscape architects and urban designers do to make urban open spaces streets and squares more responsive lively and safe Urban Sustainability through Environmental Design answers this question by providing the analytical tools and practical methodologies that can be employed for sustainable solutions to the design and management of urban environments The book calls into question the capability of quick fix development solutions to provide the establishment of fixed communities and suggests a more time conscious and evolutionary approach This is the first significant book to draw together a pan European view on sustainable urban design with a specific focus on social sustainability It presents an innovative approach that focuses on the tools of urban analysis rather than the interventions themselves With its practical approach and wide ranging discussion this book will appeal to all those involved in producing communities and spaces for sustainable living from students to academics through to decision makers and professional leaders

Use and Adaptation of Precedents in Architectural Design Karina Moraes Zarzar, 2003 This is a Ph D thesis For centuries architects have used design precedents in the conception of new design solutions Whether explicitly as in the case of Le Corbusier James Stirling and Jo Coenen or implicitly as with J J P Oud Aldo van Eyk

The Insect Epiphany Barrett Klein, 2024-10-15 From entomologist Barrett Klein comes a buzz worthy exploration of the many ways insects have affected human society history and culture Insects surround us They fuel life on Earth through their roles as pollinators predators and prey but rarely do we consider the outsize influence they have had on our culture and civilization Their anatomy and habits inform how we live work create art and innovate Featuring nearly 250 color images from ancient etchings to avant garde art from bug based meals to haute couture The Insect Epiphany proves that our world would look very different without insects not just because they are crucial to our ecosystems but because they have shaped and inspired so many aspects of what makes us human

Headspace Paul Keedwell, 2017-03-16 An examination of the secret psychology of the city and how it affects our daily happiness More and more of us are choosing to live in the man made environment of the city The mismatch between this artificial world and our nature starved souls can contribute to the stresses of city living in a way that is barely noticed but is crucially important What does the science of architectural psychology tell us about how the world of brick and concrete affects how we think feel and behave In an increasingly crowded urban world how does good urban design inspire restore and bring us together Conversely how does bad architecture cause anxiety alienation and depression Starting with the home and reaching out to the street neighbourhood and wider city landscape Headspace teaches us how to see our cities differently and how we can best adapt to our rapidly changing urban world Praise for Headspace Full of interesting nuggets Presents the results of scores of scientific studies into the physical environment and does so in a pleasant discursive way Will Wiles RIBA Journal A properly glorious book Amazing Monocle Radio Links what we build with what we do It s an important question an architectural holy grail in a way Evening Standard
