Infectious Diseases: World Tuberculosis Day 2022 Johannes Alffenaar,Sebastian G. Wicha,Shashikant Srivastava,2023-10-16 World Tuberculosis TB Day takes place on 24th March and is designed to build awareness about the global epidemic of TB as well as the efforts and advances in eliminating the disease TB is one of the leading causes of death from infectious diseases The 24th March commemorates that day when Dr Robert Koch announced that a small group of scientists at the University of Berlin s Institute had discovered the cause of tuberculosis the TB bacillus in 1882 This marked a turning point in the story of virulent human infectious diseases It is in this spirit that Frontiers is launching this Research Topic to coincide with this United Nations UN day This occasion not only offers an opportunity to acknowledge and build awareness of the diseases but also to consider the importance of research in pharmacology and advances in treatment strategies *Physiological and Pathological Responses to Hypoxia and High Altitude* Rodrigo Iturriaga,Rodrigo Del Rio,Jean-Paul R-Richalet,2020-06-22 The appearance of photosynthetic organisms about 3 billion years ago increased the partial pressure of oxygen PO₂ in the atmosphere and enabled the evolution of organisms that use glucose and oxygen to produce ATP by oxidative phosphorylation Hypoxia is commonly defined as the reduced availability of oxygen in the tissues

produced by different causes which include reduction of atmospheric PO₂ as in high altitude and secondary to pathological conditions such as sleep breathing and pulmonary disorders anemia and cardiovascular alterations leading to inadequate transport delivery and exchange of oxygen between capillaries and cells Nowadays it has been shown that hypoxia plays an important role in the genesis of several human pathologies including cardiovascular renal myocardial and cerebral diseases in fetal young and adult life Several mechanisms have evolved to maintain oxygen homeostasis Certainly all cells respond and adapt to hypoxia but only a few of them can detect hypoxia and initiate a cascade of signals intended to produce a functional systemic response In mammals oxygen detection mechanisms have been extensively studied in erythropoietin producing cells chromaffin cells bulbar and cortical neurons pulmonary neuroepithelial cells smooth muscle cells of pulmonary arteries and chemoreceptor cells While the precise mechanism underpinning oxygen sensing is not completely known several molecular entities have been proposed as possible oxygen sensors i e Hem proteins ion channels NADPH oxidase mitochondrial cytochrome oxidase Remarkably cellular adaptation to hypoxia is mediated by the master oxygen sensitive transcription factor hypoxia inducible factor 1 which can induce up regulation of different genes to cope the cellular effects related to a decrease in oxygen levels Short term responses to hypoxia included mainly chemoreceptor mediated reflex ventilatory and hemodynamic adaptations to manage the low oxygen concentration while more prolonged exposures to hypoxia can elicit more sustained physiological responses including switch from aerobic to anaerobic metabolism vascularization and enhancement of blood O₂ carrying capacity The focus of this research topic is to provide an up to date vision on the current knowledge on oxygen sensing mechanism physiological responses to acute or chronic hypoxia and cellular tissue organ adaptations to hypoxic environment
