Schneider,Veronica Hinman,Mathilda Mommersteeg,Stefano Tiozzo,2023-04-18 **Bioelectrics** Hidenori Akiyama,Richard Heller,2016-09-19 This book focuses on bioelectrics a new multidisciplinary field encompassing engineering and biology with applications to the medical environmental food energy and biotechnological fields At present 15 universities and institutes in Japan the USA and the EU comprise the International Consortium of Bioelectrics intended to advance this novel and important research field This book will serve as an introductory resource for young scientists and also as a textbook for use by both undergraduate and graduate students the world s first such work solely devoted to bioelectrics Advances in the Biology and Medicine of Pain Alexandra Latini,Michael Costigan,2022-02-16 *Biology of the Uterus* Ralph

Wynn,2013-06-29 In the decade following the publication of the first edition of Cellular Biology of the Uterus advances in this field have been so rapid as to require not merely a revision of the earlier text but an essentially new volume Even the title of the book has been changed to Biology of the Uterus to reflect the incorporation of more material based on classical anatomy and physiology This histological and embryological information provides a necessary though often lacking background for the protein chemist and molecular biologist and a bridge between biochemistry and biophysics on the one hand and clinical medicine on the other Thus major practical problems in human reproduction such as the mode of action of contraceptive agents and the cause of the initiation of labor may be approached on a firm scientific footing This text deals primarily with the biology of the uterus itself comparative and human rather than with placentation or pregnancy and as such is a synthesis of data derived from many techniques conventional and modern Inasmuch as it is clearly beyond the competence of anyone scientist to prepare such a text on the basis of personal knowledge and experience the aid of distinguished biologists from this country and abroad was enlisted All of these authors acknowledged experts in their respective fields agreed to extensive revision of their chapters or preparation of entirely new contributions Nanomaterial Biointeractions at the Cellular, Organismal and System Levels Nilesh Sharma,Shivendra Sahi,2021-03-26

The range of nanomaterial applications has expanded recently from catalysis electronics and filtration to therapeutics diagnostics agriculture and food because of unique properties and potentials of different nanoparticles and nanomaterials Research shows that these exquisite particles can interact with an organism at the cellular physiological biochemical and molecular levels However our knowledge of how they affect these changes selectively or generally in diverse organism or ecosystems is very limited and far from satisfactory Data indicate that the biological function largely depends on the shape size and surface characteristics of the nanoparticles used

besides life cycle stages of an organism Therefore this compilation will focus on the body of work carried out by distinguished investigators using diverse nanomaterials and plant and animal species This book includes specific case studies as well as general review articles highlighting aspects of multilayered interactions and targets not only research and academic scholars but also the concerned industry and policy makers as well Marine microbial symbioses: Host-microbe interaction, holobiont's adaptation to niches and global climate change Zhiyong Li, Sen-Lin Tang, 2024-05-14 Biology of Sharks and Their Relatives Jeffrey C. Carrier, Colin A. Simpfendorfer, Michael R. Heithaus, Kara E. Yopak, 2022-06-08 Biology of Sharks and Their Relatives is an award winning and groundbreaking exploration of the fundamental elements of the taxonomy systematics physiology and ecology of sharks skates rays and chimera This edition presents current research as well as traditional models to provide future researchers with solid historical foundations in shark research as well as presenting current trends from which to develop new frontiers in their own work Traditional areas of study such as age and growth reproduction taxonomy and systematics sensory biology and ecology are updated with contemporary research that incorporates emerging techniques including molecular genetics exploratory techniques in artificial insemination and the rapidly expanding fields of satellite tracking remote sensing accelerometry and imaging With two new editors and 90 contributors from the US UK South Africa Portugal France Canada New Zealand Australia India Palau United Arab Emirates Micronesia Sweden Argentina Indonesia Cameroon and the Netherlands this third edition is the most global and comprehensive yet It adds six new chapters representing extensive studies of health stress disease and pathology and social structure and continues to explore elasmobranch ecological roles and interactions with their habitats The book concludes with a comprehensive review of conservation policies management and strategies as well as consideration of the potential effects of impending climate change Presenting cohesive and integrated coverage of key topics and discussing technological advances used in modern shark research this revised edition offers a well rounded picture for students and researchers
