Location:	Meeting will be via zoom, link will be sent 20 minutes before start time.
Body:	<p>During this meeting, we will go over the guidelines and the action plan, in addition to making introductions to the different teams. Throughout the duration of this meeting, we are going to have a discussion about a variety of the management strategies that I put into practice. When it comes to making decisions, I place a significant amount of weight on the input of the team because it will ultimately be up to you to put those decisions into effect. I am confident that this team, because of the wide variety of experiences that its members bring to the table, will be able to handle challenging circumstances in the industry that we are focusing on as well as in other international markets. This belief is based on the fact that each member of this team brings a unique set of experiences to the table. My availability is limited because I am a member of a team that is spread throughout the globe; nonetheless, I will make every effort in my capacity to answer your questions and keep you updated about the progress that we are making. It is imperative that you bring to my attention any issues or concerns that you may be going through at this time, as well as any upcoming vacations or events that will require you to take time off of work. Team chat and email are the most effective ways for us to connect with one another due to the varied time zones; nevertheless, in the event that I am unable to assist you, I will delegate a few other people who are able to do so.</p>

Multimedia Networks Hans W. Barz, Gregory A. Bassett, 2016-03-21 The transportation of multimedia over the network requires timely and errorless transmission much more

strictly than other data. This has led to special protocols and to special treatment in multimedia applications: telephony, IP TV, streaming to overcome network issues. This book begins with an overview of the vast market combined with the user's expectations. The basic mechanisms of the audio video coding H.26x etc are explained to understand characteristics of the generated network traffic. Further chapters treat common specialized underlying IP network functions which cope with multimedia data in conjunction with special time adaptation measures. Based on those standard functions these chapters can treat uniformly SIP, H.248, High End IP TV, Webcast, Signage etc. A special section is devoted to home networks which challenge high end service delivery due to possibly unreliable management. The whole book treats concepts described in accessible IP based standards and which are implemented broadly. The book is aimed at graduate students, practitioners with good basic knowledge in computer networking. It provides the reader with all concepts of currently used IP technologies of how to deliver multimedia efficiently to the end user.

SIP Alan B. Johnston, 2009. This cutting edge book shows you how SIP provides a highly scalable and cost effective way to offer new and exciting telecommunication feature sets helping you design your next generation network and develop new applications and software stacks. Other key discussions include SIP as a key component in the Internet multimedia conferencing architecture, request and response messages, devices in a typical network, types of servers, SIP headers, comparisons with existing signaling protocols including H.323 related protocols, SDP (Session Description Protocol) and RTP (Real time Transport Protocol) and the future direction of SIP. Detailed call flow diagrams illustrate how this technology works with other protocols such as H.323 and ISUP. Moreover this book covers SIP RFC 3261 and the complete set of SIP extension RFCs.

The IMS Miikka Poikselkä, Georg Mayer, Hisham Khartabil, Aki Niemi, 2004-11-19. We have telephony to talk to each other, messaging to dispatch mail or instant messages, browsing to read published content and search engines to locate content sites. However current mobile networks do not provide the possibility for one application rich terminal to communicate with another in a peer to peer session beyond voice calls. Mobile telephony with the current technology has been hugely successful and shows that there is immense value in communicating with peers while being mobile and with increasingly available smarter multimedia terminals the communication experience will be something more than just exchanging voice. Those multimedia terminals need IP multimedia networks. Hence the Third Generation Partnership Project (3GPP) has developed a standard for SIP based IP multimedia service machinery known as The IMS (IP Multimedia Subsystem) and this informative book explains everything you need to know about it. Presents the architecture and functionality of logical elements of IMS and their interfaces providing detailed description of how elements are connected, what protocols are used and how they are used. Explains how the optimisation and security of the mobile communication environment has been designed in the form of user authentication and authorisation based on mobile identities. Illustrates how optimisation at the radio interface is achieved using specific rules at the user to network interface. This includes signalling, compression mechanisms as well as security and policy control.

mechanisms allowing radio loss and recovery detection Addresses important aspects from an operator s point of view while developing architecture such as charging framework policy and service control Describes many services on top of IMS in detail including voice presence messaging and conferencing Written in a manner that allows readers to choose the level of knowledge and understanding they need to gain about the IMS this volume will have instant appeal to a wide audience ranging from marketing managers research and development engineers network engineers developers test engineers to university students
