

TASK 1: PLANNING COMMENTARY

a.

[The central focus of the content that I will teach in the learning segment has been designed to develop the student's conceptual understanding of the relationship between length, width, perimeter, and area of a rectangle. The purpose of this segment is for students to build on their previous knowledge of perimeter and area of rectangles, and the area model strategy for multiplication and division, to develop mathematical reasoning to construct strategies for solving unknown dimensions of a rectangle. The students have peer discussions to explain their thinking and share different approaches to the problems. They will obtain procedural fluency through practice and application of the formulas as they apply to real-world scenarios. The students will develop an understanding of the core concepts of the formulas for area, and perimeter, and learn to use these formulas flexibly, and creatively, to solve problems. They will learn these strategies through activation of prior knowledge, monitoring, modeling, practice, application, and rich class discussion.]

b.

i.

ii.

iii.

[The lessons in this segment have been designed around the following learning objective and focus standard: Learning Objective "Students will interpret a word problem, to determine what strategy to use, to find an unknown dimension of a rectangle, with convincing evidence of mastery on an exit ticket". Focus standard "Apply the area and perimeter formulas for rectangles in real-world and mathematical problem".

The students will demonstrate a conceptual understanding of the learning objective and focus standard in the following ways. They create models of rectangles using labels to annotate dimensions of rectangles. Students will use symbols to represent the length, width, perimeter, and area to highlight concepts in the formula for area, and perimeter. Interactive Whiteboards will be used to find the unknown dimensions of rectangles. Vocabulary terms will be used to describe strategies and concepts.

The students will demonstrate procedural fluency as it relates to the learning objective and focus standard in the following ways. Students will apply the formulas for area and perimeter to find unknown dimensions of rectangles with flexibility when they modify the formulas to find dimensions such as the length and width of a rectangle. Students will have the opportunity to illustrate procedural fluency in class discussions, during guided and independent practice, and on exit tickets, when explaining how they used the formulas effectively.
