Face Detection And Recognition Theory And Practice:

Face Detection and Recognition Asit Kumar Datta, Madhura Datta, Pradipta Kumar Banerjee, 2015-10-28 Face detection and recognition are the nonintrusive biometrics of choice in many security applications. Examples of their use include border control, driver's license issuance, law enforcement investigations, and physical access control. *Face Detection and Recognition: Theory and Practice* elaborates on and explains the theory and practice of face detection and recognition. *Software Engineering and Knowledge Engineering: Theory and Practice* Wei Zhang, 2012-06-30 2012 International Conference on Software Engineering Knowledge Engineering and Information Engineering SEKEIE 2012 will be held in Macau April 1-2, 2012. This conference will bring researchers and experts from the three areas of Software Engineering, Knowledge Engineering, and Information Engineering together to share their latest research results and ideas. This volume book covered significant recent developments in the Software Engineering, Knowledge Engineering, and Information Engineering field, both theoretical and applied. Digital Forensics and Internet of Things Anita Gehlot, Rajesh Singh, Jaskaran Singh, Neeta Raj Sharma, 2022-03-15 DIGITAL FORENSICS AND INTERNET OF THINGS It pays to be ahead of the criminal and this book helps organizations and people to create a path to achieve this goal. The book discusses applications and challenges professionals encounter in the burgeoning field of IoT forensics. IoT forensics attempts to align its workflow to that of any forensics practice: investigators identify, interpret, preserve, analyze, and present any relevant data. As with any investigation, a timeline is constructed, and with the aid of smart devices, providing data, investigators might be able to capture much more specific data points than in a traditional crime. However, collecting this data can often be a challenge as it frequently doesn't live on the device itself but

rather in the provider's cloud platform. If you can get the data off the device you'll have to employ one of a variety of methods given the diverse nature of IoT devices hardware software and firmware. So while robust and insightful data is available acquiring it is no small undertaking. Digital Forensics and Internet of Things encompasses State of the art research and standards concerning IoT forensics and traditional digital forensics. Compares and contrasts IoT forensic techniques with those of traditional digital forensics standards. Identifies the driving factors of the slow maturation of IoT forensic standards and possible solutions. Applies recommended standards gathered from IoT forensic literature in hands on experiments to test their effectiveness across multiple IoT devices. Provides educated recommendations on developing and establishing IoT forensic standards research and areas that merit further study. Audience Researchers and scientists in forensic sciences computer sciences electronics engineering embedded systems information technology

Intelligent Systems: From Theory to Practice Vassil Sgurev, Mincho Hadjiski, 2010-09-23 In the modern science and technology there are some research directions and challenges which are at the forefront of world wide research activities because of their relevance. This relevance may be related to different aspects. First from a point of view of researchers it can be implied by just an analytic or algorithmic difficulty in the solution of problems within an area. From a broader perspective this relevance can be related to how important problems and challenges in a particular area are to society corporate or national competitiveness etc. Needless to say that the latter more global challenges are probably more decisive a driving force for science seen from a global perspective. One of such meta challenges in the present world is that of intelligent systems. For a long time it has been obvious that the complexity of our world and the speed of changes we face in virtually all processes that have impact on our life imply a need to automate many tasks and processes that have been so far limited to human beings because they require some sort of intelligence.
