Grant, 2012-12-06 In this book S G Grant reports his study of how four Michigan elementary school teachers manage a range of reforms such as new tests textbooks and curriculum frameworks in three different school subjects reading writing and mathematics Two significant findings emerge from his comparison of these responses teachers responses vary across classrooms even when they teach in the same school building and also across the reforms a teacher might embrace reforms in one subject area but ignore proposed changes in another This study of teachers responses to reading writing and mathematics reform and the prospects for systemic reform is part of a growing trend to look at the intersection of curriculum policy and teachers classroom practice It is unique in the way the author looks at teachers responses to multiple subject matter reforms uses those responses as part of an analysis of the recent move toward systemic reform and employs empirical findings as a means of examining the current movement toward systemic reform [Reforming Reading Writing and Mathematics](#) is important reading for researchers practitioners and graduate students of educational policy teaching and learning in reading writing and mathematics and elementary education and for policy analysts in universities foundations and government [Influences on the Changing Role of the Mathematics Teacher](#) Douglas McLean Clarke, 1993 **SIERPINSKA MATHEMATICS EDUCATI**, Anna Sierpinska, Jeremy Kilpatrick, 1998-02-01 **Handbook of International Research in Mathematics Education** Lyn D. Frank K. Lester,2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters

Mathematics, Affect and Learning Peter Grootenboer, Margaret Marshman, 2015-10-17 This book examines the beliefs attitudes values and emotions of students in Years 5 to 8 aged 10 to 14 years about mathematics and mathematics education Fundamentally this book focuses on the development of affective views and responses towards mathematics and mathematics learning Furthermore it seems that students develop their more negative views of mathematics during the middle school years Years 5 to 8 and so here we concentrate on students in this critical period The book is based on a number of empirical studies including an enquiry undertaken with 45 children in Years 5 and 6 in one school a large scale quantitative study undertaken with students from a range of schools across diverse communities in New Zealand and two related small scale studies with junior secondary students in Australia This book brings substantial empirically based evidence to the widely held perception that many students have negative views of mathematics and these affective responses develop during the middle years of school The data for this book were collected with school students and students who were actually engaged in learning mathematics in their crucial middle school years The findings reported and discussed here are relevant for researchers and mathematics educators policy makers and curriculum developers and teachers and school principals engaged in the teaching of mathematics

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Handbook of Research Design in Mathematics and Science Education Anthony Edward Kelly, Richard A. Lesh, 2012-10-12 The Handbook of Research Design in Mathematics and Science Education is based on results from an NSF supported project REC 9450510 aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and

science education A primary goal is to describe several of the most important types of research designs that have been pioneered recently by mathematics and science educators have distinctive characteristics when they are used in projects that focus on mathematics and science education and have proven to be especially productive for investigating the kinds of complex interacting and adapting systems that underlie the development of mathematics or science students and teachers or for the development dissemination and implementation of innovative programs of mathematics or science instruction The volume emphasizes research designs that are intended to radically increase the relevance of research to practice often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process Examples of such research designs include teaching experiments clinical interviews analyses of videotapes action research studies ethnographic observations software development studies or curricula development studies more generally and computer modeling studies This book s second goal is to begin discussions about the nature of appropriate and productive criteria for assessing and increasing the quality of research proposals projects or publications that are based on the preceding kind of research designs A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research The NSF supported project from which this book developed involved a series of mini conferences in which leading researchers in mathematics and science education developed detailed specifications for the book and planned and revised chapters to be included Chapters were also field tested and revised during a series of doctoral research seminars that were sponsored by the University of Wisconsin s OERI supported National Center for Improving Student Learning and Achievement in Mathematics and Science In these seminars computer based videoconferencing and www based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders responding to questions and comments from doctoral students and faculty members representing more than a dozen leading research universities throughout the USA and abroad A Web site with additional resource materials related to this book can be found at <http://www.soe.purdue.edu/smsc/lesh> This internet site includes directions for enrolling in seminars participating in ongoing discussion groups and submitting or downloading resources which range from videotapes and transcripts to assessment instruments or theory based software to publications or data samples related to the research designs being discussed

illustrate how different methodologies come to life when applied to a specific question in a specific context Many of the methodologies described are also applicable outside mathematics education but the examples provided are chosen so as to situate the approach in a mathematical context *Mathematics Education in Korea* Jinho Kim,2013 This book will introduce the history and practices of mathematics education in Korea How it has been influenced from Japan America and other countries and has developed into the unique Korean style of mathematics education The editors have planned to include most of the topics researchers outside Korea want to know mathematics education in Korea Comprehensive Reform for Student Success Nan L. Maxwell,Ann E. Person,2017-01-19 Community colleges face pressure to do more with less that have prompted many college leaders to consider fundamental changes to the ways they have typically done business Because piecemeal solutions have not often been effective or efficient colleges are moving far beyond discreet programs or interventions and are attempting to implement comprehensive reform efforts This volume conceptualizes comprehensive reform as being marked by a focus on student success a theory of change that ties programmatic components together in an intentional and cohesive package implemented at multiple levels throughout the college and touching the majority of students and a culture of evidence that uses data to continuously assess programs and processes against student success Presenting original analyses that describe the rationale for comprehensive reform this volume examines the challenges involved in implementing evaluating and sustaining those efforts This is the 176th volume of this Jossey Bass quarterly report series Essential to the professional libraries of presidents vice presidents deans and other leaders in today s open door institutions New Directions for Community Colleges provides expert guidance in meeting the challenges of their distinctive and expanding educational mission **Modern Mathematics** Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in

launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
