Risk and Interdependencies in Critical Infrastructures Per Hokstad, Ingrid B. Utne, Jørn Vatn, 2012-12-18 Today's society is completely dependent on critical networks such as water supply sewage electricity ICT and transportation Risk and vulnerability analyses are needed to grasp the impact of threats and hazards However these become quite complex as there are strong interdependencies both within and between infrastructure systems Risk and Interdependencies in Critical Infrastructures A guideline for analysis provides methods for analyzing risks and interdependencies of critical infrastructures A number of analysis approaches are described and are adapted to each of these infrastructures Various approaches are also revised and all are supported by several examples and illustrations Particular emphasis is given to the analysis of various interdependencies that often exist between the infrastructures Risk and Interdependencies in Critical Infrastructures A guideline for analysis provides a good tool to identify the hazards that are threatening your infrastructures and will enhance the understanding on how these threats can propagate throughout the system and also affect other infrastructures thereby identifying useful risk reducing measures It is essential reading for municipalities and infrastructure owners that are obliged to know about and prepare for the risks and vulnerabilities of the critical infrastructures for which they are responsible

response to the risk challenges **Risk Management and Critical Infrastructure Protection** John Moteff, 2005 The 9 11 Commission recommended that efforts to protect various modes of transportation and allocation of federal assistance to state and local governments should be based on an assessment of risk In doing so the Commission was reiterating existing federal policy regarding the protection of all the nation s critical infrastructures The Homeland Security Act of 2002 P L 107 296 and other Administration documents have assigned the Department of Homeland Security specific duties associated with coordinating with the nation s efforts to protect its critical infrastructures including using a risk management approach to set priorities Many of these duties have been delegated to the Information Analysis and Infrastructure Protection IA IP Directorate Risk assessment involves the integration of threat vulnerability and consequence information Risk management involves deciding which protective measures to take based on an agreed upon risk reduction strategy Many models methodologies have been developed by which threats vulnerabilities and risks are integrated and then used to inform the allocations of resources to reduce those risks For the most part these methodologies consist of the following elements performed more or less in the following order 1 identify assets and identify which are most critical 2 identify characterize and assess threats 3 assess the vulnerability of critical assets to specific threats 4 determine the risk i e the expected consequences of specific types of attacks on specific assets 5 identify ways to reduce those risks and 6 prioritize risk reduction measures based on a strategy The IA IP Directorate has been accumulating a list of infrastructure assets specific sites and facilities From this list the Directorate is selecting assets that have been judged to be critical from a national point of view The Directorate intends to assess the vulnerability of all assets on this shorter list According to Directorate officials vulnerability assessments and threat information are considered when determining the risk watch asset poses to the nation The risk assessment is then used to prioritize subsequent additional protection activities The IA IP Directorate s efforts to date however raise several concerns ranging from the process and criteria used to populate its lists of assets its prioritization strategy and the extent to which the Directorate is coordinating its efforts with the intelligence community and other agencies both internal and external to the Department This report will be updated as needed **European Critical Infrastructure Protection** Alessandro Lazari, 2014-07-25 The recent European Council Directive 114 08 requested the EU Member States to perform an assessment aimed at the identification and designation of the so called European Critical Infrastructures ECI Every analysis of the results of the first round of identifications and designations has only taken into account the numbers of ECIs effectively designated consequently leaving aside all of the other elements related to this important path towards a harmonized vision of the European Security This work with its unprecedented approach focuses on the elements that have maximized or frustrated the ambitious European objectives and on the issues that might have prevented the directive reaching its full potential Furthermore the study offers an in depth perspective on the lessons learned including those that can be learned from the US pre post 9 11 CIP policies as well as an assessment of the state of

play of the Member States after the implementation of the directive together with predictions for future challenges

Issues on Risk Analysis for Critical Infrastructure Protection Vittorio Rosato, Antonio Di Pietro, 2021-07-07 Critical infrastructure provides essential services to citizens. The mutual dependencies of services between systems form a complex system of systems with a large perturbation surface prone to be damaged by natural and anthropic events. Their intrinsic and extrinsic vulnerabilities could be overcome by providing them adaptive properties to allow fast and effective recovery from loss of functionality. Resilience is thus the key issue and its enhancement at the systemic level is a priority goal to be achieved. This volume reviews recent insights into the different domains resilience enhancing strategies impact and threats knowledge and dependency related issues and proposes new strategies for better critical infrastructure protection. *Critical Infrastructure Risk Assessment* Ernie Hayden, MIPM, CISSP, CEH, GICSP(Gold), PSP, 2020-08-25 ASIS Book of The Year Winner as selected by ASIS International the world's largest community of security practitioners. Critical Infrastructures: Risk and Vulnerability Assessment in Transportation of Dangerous Goods Bogdan I. Vamanu, Adrian V. Gheorghe, Polinapilinho F. Katina, 2016-04-02 This book addresses a key issue in today's society: the safer transport of dangerous goods, taking into account people, the environment and economics. In particular, it offers a potential approach to identifying the issues, developing the models, providing the methods and recommending the tools to address the risks and vulnerabilities involved. We believe this can only be achieved by assessing those risks in a comprehensive, quantifiable and integrated manner. Examining both rail and road transportation, the book is divided into three sections covering the mature and accepted by both academia and practitioners methodology of risk assessment: the vulnerability assessment, a novel approach proposed as a vital complement to risk guidance and support.
