*The Economics of Water Management in Southern Africa* Glenn-Marie Lange,Rashid M. Hassan,Jaap Arntzen,Jackie Crawford,Eric Mungatana,2007-01-01 This book presents a valuable new tool for water management water resource accounting which significantly advances the economic analysis of water Water resource accounts integrate detailed information about water supply and use with national income accounts to show the economic use of water costs and tariffs paid and the economic value of water for different economic uses Based on the UN s handbook for environmental accounting this book describes the implementation and policy application of water accounts in three African countries Botswana Namibia and South Africa and discusses how they have been used by water managers The book compares water use across the three countries explaining the differences in water resources and water policy In addition to the comprehensive outline of physical and monetary water accounts for each country the authors provide an extensive discussion of water valuation as well as addressing a number of issues of regional importance including water accounting for an international river basin and the impact of trade on each country s water use By demonstrating the usefulness of water resource accounts this book makes a major contribution to the literature on water economics and management sustainable development and to the development of environmental accounting in general The Economics of Water Management in Southern Africa will appeal to a wide readership including environmental and development economists NGOs concerned with sustainable development environmental advocacy groups professionals economists and environmentalists working in Africa on water and sustainable development issues water professionals national accounts experts and statisticians

**The Economics and Management of Water and Drainage in Agriculture** Ariel Dinar,David Zilberman,2012-12-06 Jan van Schilfgaarde USDA Agricultural Research Service and National Research Council Committee on Irrigation Induced Water Quality Problems In 1982 a startling discovery was made Many waterbirds in Kesterson National Wildlife Refuge were dying or suffering reproductive failure Located in the San Joaquin Valley Valley of

California the Kesterson Reservoir Kesterson was used to store agricultural drainage water and it was soon determined that the probable cause of the damage to wildlife was high concentrations of selenium derived from the water and water organisms in the reservoir This discovery drastically changed numerous aspects of water management in California and especially affected irrigated agriculture In fact the repercussions spilled over to much of the Western United States For a century water development for irrigation has been a religiously pursued means for economic development of the West The primary objective of the Reclamation Act of 1902 was purportedly the development of irrigation water to support family farms which in turn would enhance the regional economy Worster 1985

Bob Perez (ed), 2016 Water Management, Food Security and Sustainable Agriculture in Developing Economies M. Dinesh Kumar, M. V. K. Sivamohan, Nitin Bassi, 2013 India is a fast developing economy whose natural resource base comprising land and water supporting agricultural production are not only under enormous stress but also complex and not amenable to a uniform strategy This book addresses strategies for food security and sustainable agriculture in India including lessons to be learned in other developing economies across the world *Water for Agriculture* Stephen Merrett, 2002-03-01 Between the years 2000 and 2025 the world's population is expected to rise from six billion to about 8 billion At the present time irrigated agriculture provides one third of world food output So the advance of the irrigated sector on a global scale is a vital part of the development of the human race's capacity to feed itself This requires many skills including an economic understanding of the role of water in the irrigation and drainage of farmland The purpose of this book is to provide a text in securing such an understanding that will assist both students and professionals in the fields of agriculture development studies geography hydrology and planning As an introduction to the subject no prior knowledge of economic theory is assumed The scope of the book is wide both in its analysis and its geographical coverage A general introduction to irrigation and to economics is followed by a treatment of farmer's need for irrigation water and the costs they face in accessing it Three chapters cover the supply side infrastructure operation and maintenance An introduction is next given to the economic evaluation of irrigation and drainage projects continuing with a consideration of water allocation between sectors at the regional level The book ends with a summary of the analysis as well as sixteen proposals for policy development The approach is to make it possible for readers from a variety of backgrounds to readily access the subject matter Each chapter begins with general analytic themes and is followed by one or two detailed case studies drawn from Australia Brazil England India the Mediterranean Mexico Pakistan Palestine the Philippines and the USA The desire is to continually interrelate theory and fieldwork in an argument that is clearly expressed well structured and as easy to read as the subject permits The book is the first of its kind published since 1981 *Modeling Economic Management and Policy Issues of Water in Irrigated Agriculture* Ariel Dinar, John Letey, 1996-08-23 This work presents models that characterize the relationships between quantity and quality of irrigation water application and agricultural production and the environment A comprehensive modeling approach addressing both the

benefits of irrigation and the potential negative effects is introduced Physical biological concepts are combined with economic and engineering principles to demonstrate the usefulness of the model for analyzing various water management and policy issues Decision makers on all levels should find the modeling approach interesting and useful in the management issues from the farm to national levels Frontiers in Water Resource Economics Renan-Ulrich Goetz,Dolors Berga,2006-03-09 Most of the books published previously in the field of water resource eco nomics focus on particular aspects of water economics such as institutions pricing or water markets but none of them have given particular attention to methodological questions However the applied methodology within economic research has made some remarkable advances over the last 10 20 years Some of these advances are of particular interest to the field of water economics Therefore we think that a book that focusing on methodological advances within the field of water resource economics and showing how these advances can be applied in economic analysis of water issues makes a nice complement to the existing literature in this field We identified five areas where we consider the methodological advances to be of particular importance 1 asymmetric information and game theory 2 un certainty 3 space 4 water quality and 5 production and technology adoption The selected papers for the book fall entirely within these categories The book Frontiers in Water Resource Economics draws to a great extent on papers which were presented at the 7 Conference of the International Water and Re source Economics Consortium June 3 5 2001 held in Girona Catalonia Spain This conference was jointly organized with the 4 Conference of Environmen tal and Resource Economics by the Department of Economics University of Girona **Economics of Water Resources: From Regulation to Privatization** Nicolas Spulber,Asghar Sabbaghi,2012-12-06 The appearance of this Second Edition has been encouraged by the favorable reception of the first This has offered us the opportunity to update the materials and to expand the exposition ofour central theses concerning 1 the integration of water quantity quality issues and the treatment of water as a multi product commodity with the market playing a major role in determining water quality discriminant pricing 2 the drawbacks of public controls regulation and enforcement and the need to expand privatization of water supply and of water and wastewater treatment facilities to ensure their appropriate development and modernization through increased reliance on private capital 3 the unification and centralization of water management on the river basin level in order to handle effectively the expanding pressures for water availability for the elimination of waterborne disease for extensive and effective pollution abatement as well as coping with the related issues of soil erosion siltation in streams channels and reservoirs protection against distress from drought and floods and with the myriad problems relating to the environment recreation and navigation We have maintained the division ofthe book into four major parts and 12 chapters Economic Valuation of Water Resources in Agriculture R. Kerry Turner,2004-01-01 The purpose of this report is to produce a review on water resource valuation issues and techniques specifically for the appraisal and negotiation of raw as opposed to bulk or retail water resource allocation for agricultural development projects The review considers raw water in naturally occurring

watercourses lakes wetlands soil and aquifers taking an ecosystem function perspective at a catchment scale and takes account of the demands from irrigated and rainfed agriculture It is hoped that the review will have particular application to developing countries where agreed methods for reconciling competing uses are often absent but nevertheless takes account of valuation approaches that have been made in post industrial economies *Sustainable Water Management in Smallholder Farming* Sara Finley,2016-07-27 Water is critical to all human activities but access to this crucial resource is increasingly limited by competition and the effects of climate change In agriculture water management is key to ensuring good and sustained crop yields maintaining soil health and safeguarding the long term viability of the land Water management is especially challenging on smallholder farms in resource poor areas which tend to be primarily rainfed and thus highly dependent on unreliable rainfall patterns Sustainable practices can help farmers promote the development of soils plants and field surfaces to allow maximum retention of water between rains and encourage the efficient use of each drop of water applied as irrigation Especially useful for farmers groups agricultural extension workers NGOs students and researchers working with farmers in dryland areas this comprehensive yet concise book is a practical and accessible resource for anyone interested in sustainable water management *Improving water management in agriculture* Professor Jerry W. Knox,2024-06-11 Provides a comprehensive overview of the interventions available to optimise water management in agriculture including rainwater harvesting and farm reservoirs Considers the development and application of alternative irrigation techniques which carry a reduced environmental impact such as solar powered irrigation Addresses the importance of diversification and collaboration in securing water resources for a rapidly growing population

*Handbook of Water Resources Management: Discourses, Concepts and Examples* Janos J. Bogardi,Joyeeta Gupta,K. D. Wasantha Nandalal,Léna Salamé,Ronald R.P. van Nooijen,Navneet Kumar,Tawatchai Tingsanchali,Anik Bhaduri,Alla G. Kolechkina,2021-06-12 This book provides an overview of facts theories and methods from hydrology geology geophysics law ethics economics ecology engineering sociology diplomacy and many other disciplines with relevance for concepts and practice of water resources management It provides comprehensive but also critical reading material for all communities involved in the ongoing water discourses and debates The book refers to case studies in the form of boxes sections or as

entire chapters They illustrate success stories but also lessons to be remembered to avoid repeating the same mistakes Based on consolidated state of the art knowledge it has been conceived and written to attract a multidisciplinary audience The aim of this handbook is to facilitate understanding between the participants of the international water discourse and multi level decision making processes Knowing more about water but also about concepts methods and aspirations of different professional disciplinary communities and stakeholders professionalizes the debate and enhances the decision making

**Water Management, Food Security and Sustainable Agriculture in Developing Economies** M. Dinesh Kumar,M.V.K. Sivamohan,Nitin Bassi,2012-11-12 This book addresses strategies for food security and sustainable agriculture in developing economies The book focuses primarily on India a fast developing economy whose natural resource base comprising land and water supporting agricultural production is not only under enormous stress but also complex and not amenable to a uniform strategy It critically reviews issues which continue to dominate the debate on water management for agricultural and food production The book examines the validity of the claim that large water resources projects cause serious social and environmental damages using global and national datasets The authors examine claims that the future of Indian agriculture is in rain fed farming supported by small water harvesting They question whether water abundant eastern India could become the granary of India through a groundwater revolution with the right policy inputs In the process they look at the less researched aspect of the food security challenge which is land scarcity in eastern India The book analyzes the physical economic and social impacts of large scale adoption of micro irrigation systems using a farming system approach for north Gujarat Through an economic valuation of the multiple use benefits from tank systems in western Orissa it shows how value of water from large public irrigation systems could be enhanced The book also looks at the reasons for the limited success in bringing about the much needed institutional reforms in canal irrigation for securing higher productivity and equity using case studies of Gujarat Madhya Pradesh and Maharashtra Finally it addresses how other countries in the developing world particularly Sub Saharan Africa could learn from Indian experience     *Hearings, Reports and Prints of the Senate Committee on Appropriations* United States.
