J. Diagula, Alberta Alksne, Alfred Gessow, J. N. B. Livingood, T. H. Skopinski, Thomas V. Bollech, W. E. Phillips, 1955      **Solid Waste Management** Garima Chauhan, Surajbhan Sevda, 2023-12-01 Waste is generally identified as goods or material that are perceived to be mostly valueless. However, objects that are perceived to be waste based on consumers' object valuation can be redefined to create value. This requires a multitude of efforts using different strategies in waste prevention and management. This book is an edited collection of various chemical approaches used for valorization of solid wastes, particularly waste electrical and electronic equipment, plastic waste, and agro residue waste, that provide research insights into the concept of waste-to-energy. Covering a variety of interdisciplinary topics on waste treatment and resource recovery, makes the book one for all that serves as an excellent reading material for engineers, science scholars, entrepreneurs, and organizations who are working in the field of waste management.

**Indigenous Reconciliation and Decolonization** Ranjan Datta, 2020-12-29 This book addresses the ethical and practical issues at stake in the reconciliation of Indigenous and non-Indigenous communities. An increasing number of researchers, educators, and social and environmental activists are eager to find ways to effectively support ongoing attempts to recognize, integrate, and promote Indigenous perspectives and communities. Taking Canada as its focus, this book offers a multidisciplinary consideration of a range of reconciliation policies, practices, and initiatives that are relevant in all settler states. Set against its increasing neoliberal appropriation, the book resituates reconciliation in the everyday contexts of community interaction and engagement, as well as in the important areas of Indigenous knowledge, resource management, and social and environmental justice. Reconciliation is not just the responsibility of law and government. And attuned to the different perspectives of settlers, migrants, and refugee communities, the book examines areas of opportunity as well as obstacles to progress in the forging of a truly decolonizing framework for reconciliation. As the challenges of reconciliation cross numerous academic and substantial areas, this book will appeal to a range of scholars and practitioners working in law, politics, education, environmental studies, anthropology, and Indigenous studies.

**Semiconductor Silicon 1977** Howard R. Huff, Erhard Sirtl, 1977      *Supreme Court* ,      Thermodynamics and Exergy Analysis for Engineers Prof. Rajinder Pal, 2022-10-31 This book consists of eighteen chapters. Chapter one presents introductory concepts and definitions along with a brief discussion of the historical development of thermodynamics. Chapters two and three cover the first law of thermodynamics. Chapter two is devoted to the first law for control mass or closed systems, and Chapter three is devoted to the first law for control volume or open flow systems. The second law of thermodynamics for closed systems is presented in Chapter four. Chapter five is devoted to the second law for open systems with applications. Thermodynamics of compressible and incompressible flows in ducts and pipes is covered in depth in Chapter six. Chapter seven is devoted to estimation of volumetric and thermodynamic properties of fluids. Chapters eight to ten provide in-depth coverage of power cycles, internal combustion engines, and refrigeration cycles. Chapters eleven and twelve are devoted to vapor-liquid phase equilibrium of ideal and non-ideal systems. Chapter thirteen provides in-depth

coverage of chemical reaction equilibrium Work and entropy analysis of closed and open systems is presented along with the Gouy Stodola theorem in Chapter fourteen Due to the importance of exergy and exergy analysis in many practical applications the last four chapters Chapters fifteen to eighteen are fully devoted to this topic The available textbooks in thermodynamics rarely provide satisfactory coverage of exergy and exergy analysis of processes     Mechanics of Fluids
