Cross Cultural Risk Perception Cross Cultural Risk Perception:

Cross-Cultural Risk Perception Ortwin Renn, Bernd Rohrmann, 2013-03-14 Cross Cultural Risk Perception demonstrates the richness and wealth of theoretical insights and practical information that risk perception studies can offer to policy makers risk experts and interested parties The book begins with an extended introduction summarizing the state of the art in risk perception research and core issues of cross cultural comparisons The main body of the book consists of four cross cultural studies on public attitudes towards risk in different countries including the United States Australia New Zealand France Germany Sweden Bulgaria Romania Japan and China The last chapter critically discusses the main findings from these studies and proposes a framework for understanding and investigating cross cultural risk perception Finally implications for communication regulation and management are outlined The two editors sociologist Ortwin Renn Center of Technology Assessment Germany and psychologist Bernd Rohrmann University of Melbourne Australia have been engaged in risk research for the last three decades They both have written extensively on this subject and provided new empirical and theoretical insights into the growing body of international risk perception research *The Reality of Precaution* Jonathan B. Wiener, Michael D. Rogers, James K. Hammitt, Peter H. Sand, 2013-05-13 The Precautionary Principle has sparked the central controversy over European and U S risk regulation The Reality of Precaution is the most comprehensive study to go beyond precaution as an abstract principle and test its reality in practice This groundbreaking resource combines detailed case studies of a wide array of risks to health safety environment and security a broad quantitative analysis and cross cutting chapters on politics law and perceptions The authors rebut the rhetoric of conflicting European and American approaches to risk and show that the reality has been the selective application of precaution to particular risks on both sides of the Atlantic as well as a constructive exchange of policy ideas toward better regulation The book offers a new view of precaution regulatory reform comparative analysis and transatlantic relations **Cultural Analysis** Aaron Wildavsky, 2018-02-06 As a result of a lifetime of incomparably wide ranging investigations Aaron Wildavsky concluded that politics in the United States and elsewhere was a patterned activity exhibiting recurring regularities Political values beliefs and institutions were neither endlessly varied nor haphazardly organized They tended to exhibit a limited range of variation and were organized in discoverable predictable ways In Cultural Analysis the fourth collection of his essays posthumously published by Transaction Wildavsky argues that American politics public law and public administration are the contested terrain of rival inescapable political cultures Analysts of American politics distinguish liberals from conservatives and Democrats from Republicans but do not explain how these categories of political allegiance develop maintain themselves or change Wildavsky offers a cultural functional explanation for ideological and partisan coherence and realignment Wildavsky also felt that these dualisms did not adequately capture the ideological and partisan variation he observed on the political landscape Like others he detected another recurring strain of political allegiance that of classical liberalism or libertarianism People of this political stripe

valued freedom more than equality the primary political value of contemporary liberals and also more than order the primary political value of conservatives The value of Wildavsky's reconceptualization of the ideological and social foundations of political conflict compromise and coalition is assessed here by Wildavsky's former colleagues and students at the University of California Berkeley Dennis Coyle Richard Ellis Robert Kagan Austin Ranney and Brendon Swedlow

Weber,Christopher Hsee,1998 Enabling People-Centered Risk Communication for Geohazards Alessandro Amato,Sally H. Potter,Anna Scolobig,Eric M. Thompson,2024-07-18 In the field of natural hazards communicating science with the public and stakeholders involves entering the challenging and complex world of hazard and risk communication the ultimate purpose of which is to reduce the impact of impending hazards on people at risk According to the Sendai Framework 2015 2030 it is important to strengthen the utilization of media including social media traditional media big data and mobile phone networks to support national measures for successful disaster risk communication Sometimes risk communication has collateral and unexpected side effects that may lead to the adoption of inadequate behaviors In some instances this can even result in legal actions being taken against scientists and or emergency managers The role of the media should be to facilitate the accurate communication of hazard and risk information but such communication is often hampered by the fact that journalists have different agendas and priorities than scientists risk communicators and emergency managers This does not always support people in their decision making Accurate communication of hazard and risk is especially important when decisions have to be made within contexts where uncertainty is very high This is often the case with geohazards such as earthquakes tsunamis volcanic eruptions and landslides

Cities at Risk Helene Joffe, Tiziana Rossetto, John Adams, 2013-03-27 With the major growth of the world's population over the past century as well as rapid urbanisation, people increasingly live in crowded cities. This trend is often accompanied by proliferation of poorly built housing, uncontrolled use of land, occupation of unsafe environments, and overstretched services. When a natural hazard strikes such a city, many people are vulnerable to loss of life and property. This book explores what these people think and feel about the threats that they face. How do they live with perils ranging from earthquakes to monsoons, from floods to hurricanes in the 21st century? The authors are drawn from a large range of disciplines: Psychology, Engineering, Geography, Anthropology, and Urban Planning. They also reflect on how perils are represented in multiple cultures: the United States, Japan, Turkey, Bangladesh, the United Kingdom, and New Zealand. The book therefore not only brings to light the ways that different cultures represent natural hazards but also the different ways in which various disciplines write about living with perils in the 21st century. The book is addressed both to researchers and to organizations involved with risk management and risk mitigation.
