Mellers, David A. Schum, 2012-12-06 Decision Science and Technology is a compilation of chapters written in honor of a remarkable man Ward Edwards Among Ward s many contributions are two significant accomplishments either of which would have been enough for a very distinguished career First Ward is the founder of behavioral decision theory This interdisciplinary discipline addresses the question of how people actually confront decisions as opposed to the question of how they should make decisions Second Ward laid the groundwork for sound normative systems by noticing which tasks humans can do well and which tasks computers should perform This volume organized into five parts reflects those accomplishments and more The book is divided into four sections Behavioral Decision Theory examines theoretical descriptions and empirical findings about human decision making Decision Analysis examines topics in decision analysis Decision in Society explores issues in societal decision making The final section Historical Notes provides some historical perspectives on the development of the decision theory Within these sections major multi disciplinary scholars in decision theory have written chapters exploring some very bold themes in the field as an examination of the book s contents will show The main reason for the health of the Decision Analysis field is its close links between theory and applications that have characterized it over the years In this volume the chapters by Barron and Barrett Fishburn Fryback Keeney Moreno Pericchi

and Kadane Howard Phillips Slovic and Gregory Winkler and above all von Winterfeldt focus on those links Decision science originally developed out of concern with real decision problems and applied work such as is represented in this volume will help the field to remain strong

Complex Adaptive Leadership Nick Obolensky,2017-03-02 Complex Adaptive Leadership argues leadership should not be something only exercised by nominated leaders It is a complex dynamic process involving all those engaged in a particular enterprise The theoretical background to this lies in complexity science and chaos theory spoken and

written about in the context of leadership for the last 20 years but still little understood We all seem intuitively to know leadership isn't what it used to be but we still cling to old assumptions which look anachronistic in changing and challenging times Organisations and their contexts are increasingly paradoxical and uncertain A broader approach to leadership is needed Nick Obolensky has practised leadership in the public private and voluntary sectors He has also researched it and taught it over many years in leading business schools In this exciting book he brings together his knowledge of theory his own experience and the results of 15 years of research involving 1 500 executives in 40 countries around the world The main conclusion from that research is that the more complex things become the less traditional directive leadership is needed Those operating in the real world nonetheless need ways of coping The book is focused on helping practitioners struggling to interpret and react to increasingly complex events Arranged in four parts it provides a number of exercises tools and models that will help the reader to understand why the context for leadership has changed and why complexities in organisations have emerged what complexity is and what lessons can be drawn from this emergent area of scientific study how Complex Adaptive Leadership can be exercised in a very practical way at two levels organisationally and individually and how to get more for less the actions that can be taken when Complex Adaptive Leadership is applied The book will particularly appeal to practitioners wishing to add to their knowledge of leadership theory
