THE NATURE OF PROBABILITY AND STATISTICS

- The basic idea behind all the statistical methods of data analysis is to make *inferences about a population by studying a relatively small sample* chosen from it.
- Overview of *statistics, probability*, and basic *pertained terminology* can be illustrated using the following example.
- Assume a batch of approximately 10,000 bolts to be tested for strength in tension. The whole batch is called *population* according to statistics terminology, *Figure 1.1-1*.

A batch, *Population* in statistics terminology, of approximately 10,000 bolts to be checked for strength.

Figure 1.1-1: Population of high strength bolts.

- It is *almost impossible to test each member* within the population for the following reasons:
 - The test may be *destructive in nature*.
 - Some items may be *physically unobtainable*, e.g. bolts that are not produced yet.
 - The test would be *too costly*.
 - The test would be *time-consuming*.
- Therefore, a *statistical approach should be used*. The current statistical approach is based on the following steps.
