Chapter 15: Materials and Chapter 16: Superconducting and Superconducting Superconducting materials and their properties with conducting properties.

Learning Objectives in

Discuss the properties, resistivity, and superconductivity of superconductors.

What should you know?

Superconductors are materials that exhibit zero resistance during superconducting state. They are composed of several different materials, including pure elements, alloys, and compounds. Superconductors are used in many applications, including magnetic levitation, power transmission, and medical imaging. Superconductors have some unique properties, such as zero resistance and perfect diamagnetism (Meissner effect).

There are two types of superconductors: Type I and Type II. Type I superconductors are pure elements or alloys that exhibit superconductivity at low temperatures. Type II superconductors are compounds that exhibit superconductivity at higher temperatures. Superconductors are used in many applications, including magnetic levitation, power transmission, and medical imaging. Superconductors have some unique properties, such as zero resistance and perfect diamagnetism (Meissner effect).
