Narratology beyond the Human David Herman,2018-03-01 To what extent and in what manner do storytelling practices accommodate nonhuman subjects and their modalities of experience and how can contemporary narrative study shed light on interspecies interactions and entanglements In *Narratology beyond the Human* David Herman addresses these questions through a cross disciplinary approach to post Darwinian narratives concerned with animals and human animal relationships Herman considers the enabling and constraining effects of different narrative media examining a range of fictional and nonfictional texts disseminated in print comics and graphic novels and film In focusing on techniques such as the use of animal narrators alternation between human and nonhuman perspectives the embedding of stories within stories and others the book explores how specific strategies for portraying nonhuman agents both emerge from and contribute to broader attitudes toward animal life Herman argues that existing frameworks for narrative inquiry must be modified to take into account how stories are interwoven with cultural ontologies or understandings of what sorts of beings populate the world and how they relate to humans Showing how questions of narrative bear on ideas of species difference and assumptions about animal minds *Narratology beyond the Human* underscores our inextricable interconnectedness with other forms of

creatural life and suggests that stories can be used to resituate imaginaries of human action in a more than human world

Sustainability and the New Economics Stephen J. Williams, Rod Taylor, 2021-12-09 This multidisciplinary book provides new insights and hope for sustainable prosperity given recent developments in economics but only if swift and strong actions consistent with Earth's biophysical limits and principles of justice are universally taken It is one thing to put limits on resource throughput and waste generation to conform with the ecosystem's biocapacity It is another thing to efficiently allocate a sustainable rate of resource throughput and ensure it is equitably distributed in the form of final goods and services While the separate but interdependent decisions regarding throughput distribution and allocation are the essence of ecological economics dealing with them in a world that needs to cure its growth addiction requires a realistic understanding of macroeconomics and the fiscal capacity of currency issuing central governments Sustainable prosperity demands that we harness this understanding to carefully regulate the rate of resource throughput and manipulate macroeconomic outcomes to facilitate human flourishing The book begins by outlining humanity's current predicament of gross ecological overshoot and laments the half century of missed opportunities since The Limits to Growth 1972 What was once economic growth has become in many high income countries uneconomic growth additional costs exceeding additional benefits which is no longer advancing wellbeing Meanwhile low income nations need a dose of efficient and equitable growth to escape poverty while protecting their environments and the global commons The book argues for a synthesis of our increasing knowledge of the ecosystem's limited carrying capacity and the power of governments to harness transform and distribute resources for the common good Central to this synthesis must be a correct understanding of the difference between financial constraints and real resource constraints While the latter apply to everyone the former do not apply to currency issuing central governments which have much more capacity for corrective action than mainstream thinking perceives The book joins the growing chorus of authoritative voices calling for a complete overhaul of the dominant economic system We conclude with policy recommendations based on a new economics that if implemented would come close to guaranteeing a sustainable and prosperous future Upon reading this book at least one thing should be crystal clear business as usual is not a viable option **Advances in Agronomy** , 1995-04-25 Volume 54 contains seven reviews covering key contemporary topics in the crop and soil sciences The connections between agricultural practice and environmental impact are addressed in chapters on subsurface microbial ecology herbicide resistant field crops and nitrification inhibitors Also among this collection are reviews on the microbial reduction of iron manganese and other metals acid tolerance of wheat lentil breeding and production and the use of apomixis in cultivar development With this latest volume Advances in

Agronomy continues to be recognized as a prolific and first rate reference by the scientific community In 1993 Advances in Agronomy increased its publication frequency to three volumes per year and will continue this trend as our breadth of agronomic inquiry and knowledge continues to grow Impact of agriculture on subsurface microbial ecology Herbicide resistant crops Microbial reduction of iron manganese and other metals Nitrification inhibitors Apomixis in cultivar development

Novel Ecosystems Richard J. Hobbs, Eric S. Higgs, Carol Hall, 2013-01-07 Land conversion climate change and species invasions are contributing to the widespread emergence of novel ecosystems which demand a shift in how we think about traditional approaches to conservation restoration and environmental management They are novel because they exist without historical precedents and are self sustaining Traditional approaches emphasizing native species and historical continuity are challenged by novel ecosystems that deliver critical ecosystems services or are simply immune to practical restorative efforts Some fear that by raising the issue of novel ecosystems we are simply paving the way for a more laissez faire attitude to conservation and restoration Regardless of the range of views and perceptions about novel ecosystems their existence is becoming ever more obvious and prevalent in today s rapidly changing world In this first comprehensive volume to look at the ecological social cultural ethical and policy dimensions of novel ecosystems the authors argue these altered systems are overdue for careful analysis and that we need to figure out how to intervene in them responsibly This book brings together researchers from a range of disciplines together with practitioners and policy makers to explore the questions surrounding novel ecosystems It includes chapters on key concepts and methodologies for deciding when and how to intervene in systems as well as a rich collection of case studies and perspective pieces It will be a valuable resource for researchers managers and policy makers interested in the question of how humanity manages and restores ecosystems in a rapidly changing world A companion website with additional resources is available at www.wiley.com/go/hobbs_ecosystems
