

## "Chapter 3 Atmosphere Study Guide"

Glenn Melstetter 1.2.9.1.5

Oxygen is 21% of Earth's atmosphere

Water in the form of a gas is called water vapor

Oxygen is 21% of the gases in dry air

A process that uses oxygen is fire burning

The atmosphere is thinner because the amount of vapor varies from place to place

The envelope of gases that surrounds Earth is the atmosphere

Because air has mass, it has density and pressure

An instrument that is used to measure air pressure is a barometer

Two different units used to measure air pressure are inches of mercury and millibars

Another word for elevation, or distance above sea level, is altitude

Air pressure decreases as altitude increases

As air pressure decreases, so does air density

Air pressure is greater at sea level than on top of a mountain because air pressure at sea level has the weight of the whole atmosphere pushing on it

As altitude increases, air density decreases

The amount of oxygen in pure breath is less at high altitudes

Altitude is greater at point B

Air pressure is greater at point B

Density of the air is greater at point B

A cubic meter of air has less mass at point A

The percentage of oxygen in the air at point A is about 21%

The distance above sea level is altitude

An instrument that measures air pressure is a barometer
