Factory Approach Large Scale Software Development:

The "factory" Approach to Large-scale Software Development Michael A. Cusumano, MIT-Japan Science and Technology Program, 1987 **High Confidence Software Reuse in Large Systems** Hong Mei, 2008-07-29 Software reuse depicts a great vision for the software industry It has been widely viewed as a promising way to improve both the productivity and quality of software development However despite of the successes we have achieved there are still many issues that have limited the promotion of software reuse in the real world Therefore software reuse has remained an important hotspot of research ICSR is the premier international conference in the field of software reuse It has been an important venue for presenting advances and improvements within the software reuse domain and a powerful driving force in promoting the interaction between researchers and practitioners The theme of ICSR 10 was High Confidence Software Reuse in Large Systems A high confidence system is one that behaves in a well understood and predictable fashion Today's trends towards widespread use of commercial off the shelf COTS technology increased integration continuous evolution and larger scale are yielding more complex software systems So the problem of how to build high confidence complex systems and how to reuse software with a high level of confidence has become a new attractive topic for research Furthermore high level software asset reuse has been a goal for the last 20 30 years and it can still be considered an unsolved question Components based development MDA MDE MDD extreme programming and other techniques or methods are promising approaches to software reuse that still need more research These proceedings report on the current state of the art in software reuse Beyond the Software Factory Stanley Alan Smith, 1994 **Japan's Software Factories** Michael A. Cusumano, 1991-05-16 Though Japan has successfully competed with U S companies in the manufacturing and marketing of computer hardware it has been less successful in developing computer programs This book contains the first detailed analysis of how Japanese firms have tried to redress this imbalance by applying their skills in engineering and production management to software development Cusumano focuses on the creation of software factories in which large numbers of people are engaged in developing software in cooperative ways i e individual programs are not developed in isolation but rather utilize portions of other programs already developed whenever possible and then yield usable portions for other programs being written Devoting chapters to working methods at System Developing Corp Hitachi Toshiba NEC and Fujitsu and including a comparison of Japanese and U S software factories Cusumano's book will be important reading for all people involved in software and computer technology as well as those interested in Japanese business and corporate culture
