*Dynamic Fracture* K. Ravi-Chandar, 2004-10-16 Dynamic fracture in solids has attracted much attention for over a century from engineers as well as physicists due both to its technological interest and to inherent scientific curiosity Rapidly applied loads are encountered in a number of technical applications In some cases such loads might be applied deliberately as for example in problems of blasting mining and comminution or fragmentation in other cases such dynamic loads might arise from accidental conditions Regardless of the origin of the rapid loading it is necessary to understand the mechanisms and mechanics of fracture under dynamic loading conditions in order to design suitable procedures for assessing the susceptibility to fracture Quite apart from its repercussions in the area of structural integrity fundamental scientific curiosity has continued to play a large role in engendering interest in dynamic fracture problems In depth coverage of the mechanics experimental methods practical applications Summary of material response of different materials Discussion of unresolved issues in dynamic fracture
