Artificial Intelligence Hui-Xiong Xu, Wei Wang, Richard Gary Barr, Katsutoshi Sugimoto, 2022-02-09 **Computer Analysis of Images and Patterns** Xiaoyi Jiang, Nicolai Petkov, 2009-08-29

It was an honor and a pleasure to organize the 13th International Conference on Computer Analysis of Images and Patterns CAIP 2009 in Münster Germany. CAIP has been held biennially since 1985: Berlin 1985, Wismar 1987, Leipzig 1989, Dresden 1991, Budapest 1993, Prague 1995, Kiel 1997, Ljubljana 1999, Warsaw 2001, Groningen 2003, Paris 2005, and Vienna 2007. Initially, this conference series served as a forum for getting together scientists from East and West Europe. Nowadays, CAIP enjoys a high international visibility and attracts participants from all over the world. For CAIP 2009, we received a record number of 405 submissions. All papers were reviewed by two and in most cases three reviewers. Finally, 148 papers were selected for presentation at the conference, resulting in an acceptance rate of 36%. All Program Committee members and additional reviewers listed here deserve a great thanks for their timely and competent reviews. The accepted papers were presented either as oral presentations or posters in a single track program. In addition, we were very happy to have Aljoscha Smolic and David G.

Stork as our invited speaker to present their work in two fascinating areas. With this scientific program, we hope to continue the tradition of CAIP in providing a forum for scientific exchange at a high quality level. A successful conference like CAIP 2009 would not be possible without the support of many institutions and people. First of all, we like to thank all the authors of submitted papers and the invited speakers for their contributions. The Steering Committee members were always there when advice was needed.

Bridging the Gap Before and After Birth: Methods and Technologies to Explore the Functional Neural Development in Humans Marika Berchicci, Silvia Comani, 2015-12-18. Infant brain damage is a serious condition that affects millions of babies each year. The period from late gestation to the first year of life is the most critical one for the development of central and autonomous nervous systems. Medical conditions such as preterm birth may compromise brain function, and the end result usually is that the baby may experience long-term neurological problems related to a wide range of psychological, physical, and functional complications with consequent life-long burdens for the individuals and their families and a high socio-economic impact for the health care system and the whole of society. During the last years, several techniques have been employed to monitor the brain functional development in utero and after birth. As well, various analytical methods have been used to understand the functional maturation of the brain and the autonomous nervous system. However, in spite of the rapid improvement of diagnostic methods and procedures, there is still a widely recognized severe shortage of clinically viable means for the high-quality monitoring of the brain function in early life with a direct relevance to acute neurological illness and future neurocognitive outcomes. The studies collected in this e-book document the most recent advancements in monitoring systems, analytical methods, and clinical diagnostic procedures that contribute to increase our knowledge of the functional development of the human brain and autonomous nervous system during pregnancy and after birth, with the ultimate goal of reducing fetal impairment and improving healthcare in the neonatal and infant period.
