Free Will The Mit Press Essential Knowledge Series:

Free Will Mark Balaguer, 2014-02-14 A philosopher considers whether the scientific and philosophical arguments against free will are reason enough to give up our belief in it In our daily life it really seems as though we have free will that what we do from moment to moment is determined by conscious decisions that we freely make You get up from the couch you go for a walk you eat chocolate ice cream It seems that we re in control of actions like these if we are then we have free will But in recent years some have argued that free will is an illusion The neuroscientist and best selling author Sam Harris and the late Harvard psychologist Daniel Wegner for example claim that certain scientific findings disprove free will In this engaging and accessible volume in the Essential Knowledge series the philosopher Mark Balaguer examines the various arguments and experiments that have been cited to support the claim that human beings don t have free will He finds them to be overstated and misguided Balaguer discusses determinism the view that every physical event is predetermined or completely caused by prior events He describes several philosophical and scientific arguments against free will including one based on Benjamin Libet s famous neuroscientific experiments which allegedly show that our conscious decisions are caused by neural events that occur before we choose He considers various religious and philosophical views including the philosophical pro free will view known as compatibilism Balaguer concludes that the anti free will arguments put forward by philosophers psychologists and neuroscientists simply don t work They don t provide any good reason to doubt the existence of free will But he cautions this doesn t necessarily mean that we have free will The question of whether we have free will remains an open one we simply don t know enough about the brain to answer it definitively *Imagine the Unimaginable* Richard Rowe, 2018-12-27

Imagining the Unimaginable is an inventor s journey to answer age old questions from a modern day perspective using only first hand human experiences What happens after we die Is there an afterlife Why is there so much suffering in the world Why do bad things happen to good people **Recommendation Engines** Michael Schrage, 2020-09-01 How companies like Amazon Netflix and Spotify know what you might also like the history technology business and societal impact of online recommendation engines Increasingly our technologies are giving us better faster smarter and more personal advice than our own families and best friends Amazon already knows what kind of books and household goods you like and is more than eager to recommend more YouTube and TikTok always have another video lined up to show you Netflix has crunched the numbers of your viewing habits to suggest whole genres that you would enjoy In this volume in the MIT Press s Essential Knowledge series innovation expert Michael Schrage explains the origins technologies business applications and increasing societal impact of recommendation engines the systems that allow companies worldwide to know what products services and experiences you might also like *The Book* Amaranth Borsuk, 2018-05-04 The book as object as content as idea as interface What is the book in a digital age Is it a physical object containing pages encased in covers Is it a portable device that gives us access to entire libraries The codex the book as bound paper sheets emerged around 150 CE It was preceded by clay tablets

and papyrus scrolls Are those books In this volume in the MIT Press Essential Knowledge series Amaranth Borsuk considers the history of the book the future of the book and the idea of the book Tracing the interrelationship of form and content in the book's development she bridges book history book arts and electronic literature to expand our definition of an object we thought we knew intimately Contrary to the many reports of its death which has been blamed at various times on newspapers television and e readers the book is alive Despite nostalgic paeans to the codex and its printed pages Borsuk reminds us the term book commonly refers to both medium and content And the medium has proved to be malleable Rather than pinning our notion of the book to a single form Borsuk argues we should remember its long history of transformation Considering the book as object content idea and interface she shows that the physical form of the book has always been the site of experimentation and play Rather than creating a false dichotomy between print and digital media we should appreciate their continuities

Understanding Beliefs Nils J. Nilsson, 2014-08-01 What beliefs are what they do for us how we come to hold them and how to evaluate them Our beliefs constitute a large part of our knowledge of the world We have beliefs about objects about culture about the past and about the future We have beliefs about other people and we believe that they have beliefs as well We use beliefs to predict to explain to create to console to entertain Some of our beliefs we call theories and we are extraordinarily creative at constructing them Theories of quantum mechanics evolution and relativity are examples But so are theories about astrology alien abduction guardian angels and reincarnation All are products with varying degrees of credibility of fertile minds trying to find explanations for observed phenomena In this book Nils Nilsson examines beliefs what they do for us how we come to hold them and how to evaluate them We should evaluate our beliefs carefully Nilsson points out because they influence so many of our actions and decisions Some of our beliefs are more strongly held than others but all should be considered tentative and changeable Nilsson shows that beliefs can be quantified by probability and he describes networks of beliefs in which the probabilities of some beliefs affect the probabilities of others He argues that we can evaluate our beliefs by adapting some of the practices of the scientific method and by consulting expert opinion And he warns us about belief traps holding onto beliefs that wouldn't survive critical evaluation The best way to escape belief traps he writes is to expose our beliefs to the reasoned criticism of others

Behavioral Insights Michael Hallsworth, Elspeth Kirkman, 2020-09-01 The definitive introduction to the behavioral insights approach which applies evidence about human behavior to practical problems Our behavior is strongly influenced by factors that lie outside our conscious awareness although we tend to underestimate the power of this automatic side of our behavior As a result governments make ineffective policies businesses create bad products and individuals make unrealistic plans In contrast the behavioral insights approach applies evidence about actual human behavior rather than assumptions about it to practical problems This volume in the MIT Press Essential Knowledge series written by two leading experts in the field offers an accessible introduction to behavioral insights describing core features origins and practical examples These insights have opened up new ways of addressing some of the biggest challenges faced by societies changing the way that governments businesses and nonprofits work in the process This book shows how the approach is grounded in a concern with practical problems the use of evidence about human behavior to address those problems and experimentation to evaluate the impact of the solutions It gives an overview of the approach s origins in psychology and behavioral economics its early adoption by the UK s pioneering nudge unit and its recent expansion into new areas The book also provides examples from across different policy areas and guidance on how to run a behavioral insights project Finally the book outlines the limitations and ethical implications of the approach and what the future holds for this fast moving area

Death and Dying Nicole Piemonte, Shawn Abreu, 2021-09-07 An examination of the contemporary medicalization of death and dying that calls us to acknowledge instead death s existential and emotional realities Death is a natural inevitable and deeply human process and yet Western medicine tends to view it as a medical failure In their zeal to prevent death physicians and hospitals often set patients and their families on a seemingly unstoppable trajectory toward medical interventions that may actually increase suffering at the end of life This volume in the MIT Press

Essential Knowledge series examines the medicalization of death and dying and proposes a different approach one that acknowledges death's existential and emotional realities The authors one an academic who teaches and studies end of life care and the other a physician trained in hospice and palliative care offer an account of Western style death and dying that is informed by both research and personal experience They examine the medical profession's attitude toward death as a biological dysfunction that needs fixing describe the hospice movement as well as movements for palliative care and aid in dying and why they failed to influence mainstream medicine consider our reluctance to have end of life conversations and investigate the commodification of medicine and the business of dying To help patients die in accordance with their values they say those who care for the dying should focus less on delaying death by any means possible and more on being present with the dying on their journey
