Theistic Evolution J. P. Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. Gauger, Wayne Grudem, 2020-06-20 Winner of the ECPA Book of the Year Award for Bible Reference Works Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life They argue that God used albeit in an undetectable way evolutionary mechanisms to produce all forms of life

Featuring two dozen highly credentialed scientists philosophers and theologians from Europe and North America this volume contests this proposal documenting evidential logical and theological problems with theistic evolution making it the most comprehensive critique of theistic evolution yet produced Explains why theistic evolution is not congruent with a biblical worldview Features nineteen essays written by well known experts in their fields Designed to be used as a textbook for courses on religion and evolution Accessible for those without expertise in the subject

**A Voice in the Wilderness** Professor Joseph L Graves Jr., 2022-09-13 Why understanding evolution the most reviled branch of science can help us all from fighting pandemics to undoing racism Evolutionary science has long been regarded as conservative a tool for enforcing regressive ideas particularly about race and gender But in A Voice in the Wilderness evolutionary biologist Joseph L Graves Jr once styled as the Black Darwin argues that his field is essential to social justice He shows for example why biological races do not exist He dismantles recent work in human biodiversity seeking genes to explain the achievements of different ethnic groups He decimates homophobia sexism and classism as well As a pioneering Black biologist a leftist and a Christian Graves uses his personal story his journey from a child of Jim Crow to a major researcher and leader of his peers to rewrite his field A Voice in the Wilderness is a powerful work of scientific anti racism and a moving account of a trailblazing life

**Handbook of Research on Active Learning and Student Engagement in Higher Education** Keengwe, Jared, 2022-06-10 Active learning occurs when a learning task can be related in a non arbitrary manner to what the learner already knows and when there is a personal recognition of the links between concepts The most important element of active learning is not so much in how information is presented but how new information is integrated into an existing knowledge base In order to successfully implement active learning into higher education its effect on student engagement must be studied and considered The Handbook of Research on Active Learning and Student Engagement in Higher Education focuses on assessing the effectiveness of active learning and constructivist teaching to promote student engagement and provides a wide range of strategies and frameworks to help educators and other practitioners examine the benefits challenges and opportunities for using active learning approaches to maximize student learning Covering topics such as online learning environments and engagement approaches this major reference work is ideal for academicians practitioners researchers librarians industry professionals educators and students

**Approaches to Plant Evolutionary Ecology** G.P. Cheplick, 2015-06-01 Plant evolutionary ecology is a rapidly growing discipline which emphasizes that populations adapt and evolve not in isolation but in relation to other species and abiotic environmental features such as climate Although it departs from traditional evolutionary and ecological fields of study the field is connected to branches of ecology genetics botany conservation and to a number of other fields of applied science primarily through shared concepts and techniques However most books regarding evolutionary ecology focus on animals creating a substantial need for scholarly literature with an emphasis on plants Approaches to Plant Evolutionary Ecology is the first book to specifically explore the evolutionary

characteristics of plants filling the aforementioned gap in the literature on evolutionary ecology. Renowned plant ecologist Gregory P. Cheplick summarizes and synthesizes much of the primary literature regarding evolutionary ecology, providing a historical context for the study of plant populations from an evolutionary perspective. The book also provides summaries of both traditional common gardens, reciprocal transplants, and modern molecular genetic approaches used to address questions about plant adaptation to a diverse group of abiotic and biotic factors. Cheplick provides a rigorously written introduction to the rapidly growing field of plant evolutionary ecology that will appeal to undergraduate and graduate students with an interest in ecology and evolution as well as educators who are teaching courses on related topics. **Evolutionary Analysis**

Jon C. Herron, Scott Freeman, 2013-08-16 For undergraduate courses in Evolution. The authors convey the excitement and logic of evolutionary science by introducing principles through recent and classical studies and by emphasizing real-world applications. In the Fifth Edition, co-author Jon Herron takes the lead in streamlining and updating content to reflect key changes in the field. The design and art program have also been updated for enhanced clarity. **Evolution Evolving** Kevin N. Lala, Tobias Uller, Nathalie Feiner, Marcus Feldman, Scott F. Gilbert, 2024-09-24 A new account of the central role developmental processes play in evolution. A new scientific view of evolution is emerging, one that challenges and expands our understanding of how evolution works. Recent research demonstrates that organisms differ greatly in how effective they are at evolving. Whether and how each organism adapts and diversifies depends critically on the mechanistic details of how that organism operates its development, physiology, and behavior. That is because the evolutionary process itself has evolved over time and continues to evolve. The scientific understanding of evolution is evolving too, with groundbreaking new ways of explaining evolutionary change. In this book, a group of leading biologists draw on the latest findings in evolutionary genetics and evo devo, as well as novel insights from studies of epigenetics, symbiosis, and inheritance, to examine the central role that developmental processes play in evolution. Written in an accessible style and illustrated with fascinating examples of natural history, the book presents recent scientific discoveries that expand evolutionary biology beyond the classical view of gene transmission guided by natural selection. Without undermining the central importance of natural selection and other Darwinian foundations, new developmental insights indicate that all organisms possess their own characteristic sets of evolutionary mechanisms. The authors argue that a consideration of developmental phenomena is needed for evolutionary biologists to generate better explanations for adaptation and biodiversity. This book provides a new vision of adaptive evolution. **The SAGE Encyclopedia of Theory in Psychology** Harold L. Darwin's Roadmap to the Curriculum Glenn Geher, David Sloan Wilson, Hadassah Head, Andrew Gallup, 2019-05-01 There is a paradox when it comes to Darwinian ideas within the academy On one hand Darwin's theories have famously changed the foundational ideas related to the origins of life shaping entire disciplines in the biological sciences On the other hand people in educated societies across the globe today are famously misinformed and uneducated about Darwinian principles and ideas Applications of evolutionary theory outside the traditional areas of biology have been slow to progress and scholars doing such work regularly run into all kinds of political backlash However a slow but steady push to advance the teaching of evolution across academic disciplines has been under way for more than a decade This book serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies EvoS providing clear examples of how evolutionary concepts relate to all facets of life Further this book provides chapters dedicated to the processes associated with an EvoS education including examples of how an interdisciplinary approach to evolutionary theory has been implemented successfully at various colleges universities and degree programs This book also offers chapters outlining a variety of applications to an evolution education including improved sustainable development medical practices and creative and critical thinking skills Exploring controversies surrounding evolution education this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry

**Biodiversity** Edmundas Lekevičius, 2022-09-20 Species are not functionally independent From a long term perspective only ecosystem with a fully integrated nutrient cycle is alive The lack of trophic autonomy should be considered one of the key factors that ensure and maintain biodiversity The variability of abiotic conditions both in space and in time also creates a huge diversity of niches and subniches for genotypes and species In addition life maintains its essential variables biomass and productivity as stable as possible due to the diversity of structures genes macromolecules metabolic pathways genotypes species etc the structures that reach optima are multiplied and thus activated while the functioning of those which lost their optima is suppressed The facts and concepts presented in this monograph thus support the conclusions that a genotype and species diversity is supported by trophic specialisation b biodiversity helps to stabilise the functions essential variables of individuals populations and ecological communities c in evolution the emergence of biodiversity is determined by heritable variation and the advantage of specialised more effective structures over non specialised ones d biodiversity is characterised by its ability to increase itself and to organise itself into relatively consistent structures which we call production pyramids and nutrient

cycles This book therefore provides an answer to the question why the diversity of life is of such and such a nature

**Dinosaurs, Volcanoes, and Holy Writ** James L. Hayward, 2020-04-29 An earnest young boy who loves nature grows up the son of a fundamentalist pastor He goes to college trains as a biologist and becomes a successful university professor In the process he finds some of the religious beliefs that carried him through childhood and adolescence indefensible in the face of evidence from biology and geology and even from Scripture itself What s he to do This is the journey of a boy turned scientist who finds a path away from the idols of fundamentalism and toward a universe rich with process intrigue and mystery Along the way he discovers a faith consistent with physical reality one open to beauty kindness and hope *We Did*
