Elliott, Kenneth L. Kraemer, 2008 Computerization movement CM refers to a special kind of

social and technological movement that promotes the adoption of computing within organizations and society Through theoretical analyses systematic empirical studies field based studies and case studies of specific technologies the book shows CMs to be driven by Utopian visions of technology that become part of the ether within society The empirical studies presented here show the need for designers users and the media to be aware that CM rhetoric can propose grand visions that never become part of a reality and reinforce the need for critical and scholarly review of promising new technologies

James,2003-01-01 According to many observers the global digital divide the extent to which information technology is benefiting developed as opposed to developing countries has already established itself as the single most pervasive theme of the twenty first century The purpose of this book is to explore some of the ways in which this divide can be overcome both within and between nations Employing a rigorous analytical framework the author bases his analysis on the concept of international technological dualism He argues that one possible solution to the problem is the availability of affordable technologies such as low cost computers which are specifically designed for the income levels and socio economic conditions of developing countries He also emphasizes that the most important aim of any policy measure should be to provide universal access to information technologies rather than individual ownership Depending on whether or not this divide can be bridged will to a large degree determine whether developing countries are able to attain higher levels of productivity prosperity and global integration **InfoWorld** ,1994-10-10 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects
