Guidance, Navigation, and Control for Spacecraft Rendezvous and Docking: Theory and Methods Yongchun Xie, Changqing Chen, Tao Liu, Min Wang, 2021-02-16 This book focuses on the theory and design methods for guidance navigation and control GNC in the context of spacecraft rendezvous and docking RVD The position and attitude dynamics and kinematics equations for RVD are presented systematically in accordance with several different coordinate systems including elliptical orbital frame and recommendations are supplied on which of these equations to use in different phases of RVD The book subsequently explains the basic principles and relative navigation algorithms of RVD sensors such as GNSS radar and camera type RVD sensors It also provides guidance algorithms and schemes for different phases of RVD including the latest research advances in rapid RVD In turn the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for RVD Emphasis is placed on the design method of active and passive trajectory protection in different phases of RVD and on the safety design of the RVD mission as a whole For purposes of verification the Shenzhou spacecraft s in orbit flight mission is introduced as well All issues addressed are described and explained from basic principles to detailed engineering methods and examples providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for GNC system design in RVD

William L. Hall,1984 **Yachting** ,1998-08 Glazed Panel Construction with Human-Robot Cooperation Seungyeol Lee,2011-09-21 These days construction companies are beginning to be concerned about a potential labor shortage by demographic changes and an aging construction work force Also an improvement in construction safety could not only reduce accidents but also decrease the cost of the construction and is therefore one of the imperative goals of the construction industry These challenges correspond to the potential for Automation and Robotics in Construction as one of solutions Almost half of construction work is said to be material handling and materials used for construction are heavy and bulky for humans To date various types of robots have been developed for glazed panel construction Through the case

studies on construction to which the robots were applied however we identified difficulties to be overcome In this study a human robot cooperative system is deduced as one approach to surmount these difficulties then considerations on interactions among the operator robot and environment are applied to design of the system controller The human robot cooperative system can cope with various and construction environments through real time interaction with a human robot and construction environment simultaneously The physical power of a robot system helps a human to handle heavy construction materials with a relatively scaled down load Also a human can feel and respond to the force reflected from robot end effector acting with working environment Through the experiments and mock up tests with a prototype robot we observe the characteristics of the power assist and the force reflection the merits of the human robot cooperation system To apply human robot cooperative system at real construction sites Glazed Ceiling Panel Construction Robot is developed for the first time This robot is distinguished from other glazed panel construction robots because of the methods of lifting the panel to high installation positions and installing the fragile and bulk panel with robot force control After applying to real construction sites evaluation on the productivity of the developed robot was done by comparing and analyzing with the existing installation methods
