

# WHAT IS BOTANY?

**Botany** is the branch of biology that studies plants, including their physiology, structure, genetics, ecology, distribution, classification, and economic importance.

The word "**botany**" comes from the greek word 'botane' which means *herb*.

**Botanists** are scientists that study the biology of plants, fungi and other organisms, such as lichens and algae.

The results of **botanical research** increase and improve our supply of medicines, foods, fibers, building materials, and other plant products.

## General Botany:

General Botany Wilhelm Nultsch, 2013-10-22 General Botany covers certain aspects of general botany such as morphology anatomy and histology The book discusses the molecular constitution of plants the structural constitution of the protoplasm the cell and the cytoplasm and the differentiation of the cell The text also describes the types of organization in plants the internal and external structure of the stem the leaf and the root and water and salt balance with regard to the translocation of materials The energy procurement and the synthetic processes in autotrophic plants the respiration and energy transformations and nitrogen metabolism are also considered The book further tackles heterotrophy reproduction heredity development and the movement of plants Botanists cytologists plant physiologists and students taking related courses will find the text invaluable

*General Botany* E. N. Transeau, 1994 This book is a by product of a rather extended experience in the teaching of botany and especially of seven years of effort to develop an introductory course that would give students a broad view of the subject and enable them to see its problems and appreciate the importance of the solution of these problems

General Botany Laboratory Manual Jerry G. Chmielewski, David Kravesky, 2013-01-21 The laboratory component of General Botany provides you the opportunity to view interrelationships between and among structures to handle live or preserved material to become familiar with the many terms we use throughout the course and to learn how to use a microscope properly Each of you will have your own microscope every week no exceptions This laboratory is fundamental yet integral to your understanding of General Botany The images in your manual are intended to serve as a guide while you view permanent or prepared slides These must be viewed by each of you independently At no time will questions be answered re where is a particular structure etc unless the slide is on the stage of your microscope and in focus The content of the laboratory is rich as is the terminology You must come to lab prepared You must come to lab knowing what the various terms you are about to deal with mean There is no such thing as finishing early that simply isn't possible In some laboratory exercises you will be asked to identify structures of an organism For example Examine slide 9 labeled Rhizopus sporangia w m and identify the mitosporangia mitospores columella mitosporangiophore and zygotes In all likelihood you will only be able to see mitosporangia mitospores columella and mitosporangiophores If zygotes are absent in your slide you note that the population of hyphae you are examining are only reproducing asexually These questions are written in this manner to further fortify your understanding of the organisms in question and not to trick you Thinking about what you are viewing is not an option but a necessity The phylogeny we have adopted in this course is a composite No single phylogeny best reflects our collective understanding of all the organisms included in this course so we have created one that reflects modern thought and is based on both morphological and molecular data None is any more correct or incorrect than is any other but this is the one that we will use and the one we deem as most acceptable Rest assured much still needs to be learned about the evolution of many of the groups we will study Regardless the course does provide you a general overview

of the evolutionary biology of these various groups This is your starting point it is not the endpoint      **General Botany**
