**Chemistry Atoms First 2e** Paul Flowers,Klaus Hellmut Theopold,Richard Langley,Edward J. Neth,William R. Robinson,2019-02-14 Chemistry Atoms First 2e is a peer reviewed openly licensed introductory textbook produced through a collaborative publishing partnership between OpenStax and the University of Connecticut and UConn Undergraduate Student Government Association This text is an atoms first adaptation of OpenStax Chemistry 2e The intention of atoms first involves a few basic principles first it introduces atomic and molecular structure much earlier than the traditional approach and it threads these themes through subsequent chapters This approach may be chosen as a way to delay the introduction of material such as stoichiometry that students traditionally find abstract and difficult thereby allowing students time to acclimate their study skills to chemistry Additionally it gives students a basis for understanding the application of quantitative principles to the chemistry that underlies the entire course It also aims to center the study of chemistry on the atomic foundation that many will expand upon in a later course covering organic chemistry easing that transition when the time arrives

*CHEMISTRY JULIA. BURDGE*,2017 **Chemistry** Julia Burdge,2014-01-10 The atoms first approach provides a consistent and logical method for teaching general chemistry This approach starts with the fundamental building block of matter the atom and uses it as the stepping stone to understanding more complex chemistry topics Once mastery of the nature of atoms and electrons is achieved the formation and properties of compounds are developed Only after the study of matter and the atom will students have sufficient background to fully engage in topics such as stoichiometry kinetics equilibrium and thermodynamics Thus the Atoms First method empowers instructors to present the most complete and compelling story of general chemistry Far from a simple re ordering of topics this is a book that will truly meet the needs of the growing atoms first market

**General Chemistry Masteringchemistry Standalone Access Card** John E. McMurry,Robert C. Fay,2013-01-07 MasteringChemistry r The Mastering platform is the most effective and widely used online homework tutorial and assessment system for the sciences It delivers self paced tutorials that focus on your course objectives provide individualized coaching and respond to each student s progress The Mastering system helps instructors maximize class time with easy to assign customizable and automatically graded assessments that motivate students to learn outside of class and arrive prepared for lecture or lab New to MasteringChemistry NEW 15 Pause and

Predict Video Quizzes bring chemistry to life with lab demonstrations illustrating key topics in general chemistry. Students are asked to predict the outcome of experiments as they watch the videos; a set of multiple choice questions challenges students to apply the concepts from the video to related scenarios. NEW Multiple choice Reading Questions are provided for each chapter, making it easy to hold students accountable for doing assigned readings before lecture. NEW Approximately 500 end of chapter questions are new or revised and are supported by the tutorial questions in MasteringChemistry. The overall number of algorithmic and randomized problems has also been increased for the new edition. NEW A subset of end of chapter questions has been enhanced with hints and feedback to provide scaffolded support as students move from robust tutorials to doing end of chapter and test questions on their own. NEW All MasteringChemistry tutorials have been evaluated and in many cases edited, revised, or rewritten by an advisory board of expert chemists, all teaching with the atoms first approach to ensure the reinforcement of this approach. NEW 10 PhET tutorials have been developed around interactive applets that foster conceptual understanding and active learning. Topics include acid base solutions, balancing chemical equations, and molecular polarity.

*Chemistry* Julia Burdge, Jason Overby, 2011-01-07 The atoms first approach provides a consistent and logical method for teaching general chemistry. This approach starts with the fundamental building block of matter, the atom, and uses it as the stepping stone to understanding more complex chemistry topics. Once mastery of the nature of atoms and electrons is achieved, the formation and properties of compounds are developed. Only after the study of matter and the atom will students have sufficient background to fully engage in topics such as stoichiometry, kinetics, equilibrium, and thermodynamics. Thus, the Atoms First method empowers instructors to present the most complete and compelling story of general chemistry. Julia Burdge is renowned for setting chemistry in interesting, relevant context and for her engaging conversational writing style, presenting chemistry in a way students can appreciate and understand while satisfying instructors' requirements for rigor, accuracy, and comprehensive coverage. Jason Overby teaches general chemistry using an atoms first approach, bringing a unique perspective and years of experience to the development of this new project. Far from a simple re-ordering of topics, this is a book that will truly meet the needs of the growing atoms first market. Together, these authors have developed a product with the same appeal, modern and descriptive artwork, sound problem solving approach, and wide range of end of chapter problems that customers have come to expect from Burdge. This textbook will offer the same engaging writing style, modern and descriptive artwork, sound problem solving approach, and wide range of end of chapter problems that customers are accustomed to with the Burdge product. Jason Overby's involvement with this project was crucial, as he has been teaching with this approach for over four years, which allowed Julia and Jason to create a product that fits the need for this growing market.
