Computer and Information Science Applications in Bioprocess Engineering A.R. Moreira, Kimberlee K. Wallace, 2012-12-06 Biotechnology has been labelled as one of the key technologies of the last two decades of the 20th Century offering boundless solutions to problems ranging from food and agricultural production to pharmaceutical and medical applications as well as environmental and bioremediation problems. Biological processes however are complex and the prevailing mechanisms are either unknown or poorly understood. This means that adequate techniques for data acquisition and analysis leading to appropriate modeling and simulation packages that can be superimposed on the engineering principles need to be routine tools for future biotechnologists. The present volume presents a masterly summary of the most recent work in the field covering instrumentation systems, enzyme technology, environmental biotechnology, food applications and metabolic engineering. **Anaerobic Co-Digestion of Lignocellulosic Waste** Luis Isidoro Romero García, Carlos José Álvarez Gallego, Luis Alberto Fernández Güelfo, 2021-09-02 Some terms such as eco friendly, circular economy and green technologies have remained in our vocabulary because the truth is that mankind is altering the planet to put its own subsistence at risk. Besides for rationalization in the consumption of raw materials and energy, the recycling of

waste through efficient and sustainable processes forms the backbone of the paradigm of a sustainable industry One of the most relevant technologies for the new productive model is anaerobic digestion Historically anaerobic digestion has been developed in the field of urban wastes and wastewater treatments but in the new challenge its role is more relevant Anaerobic digestion is a technologically mature biological treatment which joins bioenergy production with the efficient removal of contaminants This issue provides a specialized but broad in scope overview of the possibilities of the anaerobic digestion of lignocellulosic biomass mainly forestry and agricultural wastes which is expected to be a more promising substrate for the development of biorefineries Its conversion to bioenergy through anaerobic digestion must solve some troubles the complex lignocellulosic structure needs to be deconstructed by pretreatments and a co substrate may need to be added to improve the biological process Ten selected works advance this proposal into the future Anaerobes and Waste Conversion Technologies Shreeshivadasan Chelliapan, Santhana Krishnan, Vasudeo Zambare, 2024-11-12 This book covers all aspects of anaerobic waste conversion technologies using anaerobes particularly in anaerobic digestion and fermentation processes It provides the latest advances in waste to energy techniques for converting solid and liquid wastes to valuable fuel and energy It goes beyond traditional municipal waste including energy recovery from various industrial wastewater and biomass Topics include biomass pretreatment metabolic pathways anaerobic reactor design product recovery and conversion technology applications Essential information is provided and individual chapters are dedicated to each topic The book assists academicians postgraduate students biochemical engineers environmental engineers analysts chemical engineers and industrial entrepreneurs in acquiring the skills needed for real time implementation of anaerobic digestion technologies

therapeutic indications Due to the high attrition rate in clinical trials a small percentage of these drugs get commercialized Still a very high amount of resources are being spent on drug development from a societal perspective Despite being an economically intense activity the current state of drug product development makes a limited effort to integrate economics into product design and development For example pharmaceutical scientists are excellent at a data driven decision making process that requires technical elements and a few strategic elements However there is minimal integration of financial valuation elements commonly employed in other high tech industries such as fine chemicals automotive aerospace etc into pharmaceutical drug development Unfortunately this hurts the sustainability of the health system of which these products will be a part in the future A desirable future state integrates fundamentals of economics in product design and development so that the decision making is parameterized the cost of goods can be lowered wastage can be reduced patient centricity is built into the design and manufacturing distribution efficiencies can be gained The financial benefits of such an approach could allow for these savings to be passed on to the stakeholders and improve the value proposition of pharmaceuticals which is critical to maintaining the innovation potential This book hopes to introduce the reader to this desired future state of pharmaceutical drug development
