Harrison, 2018-10-22 The growth of renewable energy technologies mainly wind and solar demands the development of practical and economically viable energy storage technologies This book explores the current state of the art of large scale energy storage and examines the likely environmental impacts of the main categories based on the types of energy stored

Environmental Impacts of Road Vehicles R M Harrison, R E Hester, 2017-06-16 The first concerns that come to mind in relation to pollution from road vehicles are direct emissions of carbon dioxide and toxic air pollutants These are of course important but the impacts of road traffic are altogether more substantial This volume of the Issues in Environmental Science and Technology Series takes a broader view of the effects on the environment and human health excluding only injury due to road traffic accidents By looking across the environmental media air water and soil and taking account also of noise pollution the volume addresses far more than the conventional atmospheric issues More importantly however it examines present and future vehicle technologies the implications of more extensive use of batteries in electric vehicles and the consequences of recycling vehicles at the end of use Finally examples of life cycle analysis as applied to road vehicles are reviewed This book is a comprehensive source of authoritative information for students studying pollution and for policy makers concerned with vehicle emissions and road traffic impacts more generally

Geoengineering of the Climate System Roy Harrison, Ron Hester, 2014-05-30 It is generally accepted within the scientific community that anthropogenic emissions of greenhouse gases are primarily responsible for a recent warming in global climate and that current trajectories of emissions may lead to potentially catastrophic changes in climate While reduction in emissions of greenhouse gases and particularly carbon dioxide could lead to a stabilisation of global temperatures this requires international agreements which have yet to be achieved A possible alternative which has been widely mooted is to use methods known as geoengineering as an alternative way of limiting increases in global temperature Geoengineering techniques fall into two main categories of carbon dioxide removal and solar radiation management within each of these there are a number of options Following on from Carbon Capture

volume 29 in this series Geoengineering of the Climate System presents an overview of the technologies currently being considered as large scale solutions to climate change and considers some of the possible benefits and disadvantages of each. Invited contributions have been received by many of the leading experts on these technologies and the volume provides a comprehensive overview of both carbon dioxide reduction and solar radiation management methods. These give rise to important ethical and governance issues which are also explored. Written with active researchers, postgraduate students and policy makers in mind, the latest addition to the Issues in Environmental Science Technology series presents a balanced and informed view of this important field of research and is an essential addition to any environmental science library.

Pharmaceuticals in the Environment R E Hester, R M Harrison, 2015-08-27 Medicines play an important role in the treatment and prevention of disease in humans and animals but residues from these medicines can be released into the environment through a number of routes during their manufacture, use and disposal. It is only recently that the potential environmental impacts of this exposure to pharmaceuticals are being considered. The book explores where pharmaceutical residues can be found, e.g. in surface waters, drinking water, sediments and the marine environment; the sources of these residues from manufacture through to disposal of unused medicines; how these residues break down; and how this all impacts on wildlife and human health. In reviewing the current position and examining further possible impacts, this book is an important reference for researchers working in the pharmaceutical industry as well as for environmentalists, policy makers and students on pharmacy and environmental science courses wanting to better understand the impacts of pharmaceuticals on the environment.

Still Only One Earth R M Harrison, R E Hester, 2015-07-16 Forty years since the first UN Conference on the Human Environment was held in Stockholm, how has the situation changed? We still have only one Earth but are we caring for and maintaining it? This book, written by leaders in the field, discusses the key environmental issues affecting the Earth today, including atmospheric science, the marine environment, waste management and a specific chapter looking at changes in attitude to environmental issues. Aimed at policy makers, students, environmental scientists and thinkers, this title will be an important review bringing the reader right up to date with current opinions and attitudes.

Waste as a Resource R E Hester, R M Harrison, 2013-07-01 The volume of waste produced by human activity continues to grow but steps are being taken to mitigate this problem by viewing waste as a resource. Recovering a proportion of waste for re-use immediately reduces the volume of landfill. Furthermore, the scarcity of some elements such as phosphorous and the rare earth metals increases the need for their recovery from waste streams. This volume of Issues in Environmental Science and Technology examines the potential resource available from several waste streams, both domestic and industrial. Opportunities for exploiting waste are discussed along with their environmental and economic considerations. Landfill remains an unavoidable solution in some circumstances and the current situation regarding this is also presented. Other chapters focus on mine waste, the recovery of fertilisers and the growing potential for compost. In keeping with the Issues series, this volume

is written with a broad audience in mind University students and active researches in the field will appreciate the latest research and discussion while policy makers and members of NGOs will benefit from the wealth of information presented

Chemical Alternatives Assessments R M Harrison,R E Hester,2013-04-30 Chemicals are an essential part of everyday life and all too often taken for granted yet often portrayed negatively in the media Concern over the deleterious effects of chemicals to the environment and human health have prompted governments in the developed world to establish screening programmes such as REACH and HPV Challenge to identify chemicals presenting the greatest degree of risk to health and the environment While such programmes identify chemicals with the greatest risk there is no ranking system for alternative chemicals which while being potentially less harmful still carry a degree of risk This volume of the Issues in Environmental Science and Technology series investigates how the alternatives can be assessed and their risk determined With contributions from experts across the globe this volume addresses some of the key concepts behind risk assessment of alternative chemicals Some of the current protocols adopted are discussed and several chapters explore the topic in the context of industry making this book essential reading for industrialists as well as academics postgraduate students and policy makers

Alternatives to Animal Testing Michael Balls,2006 Animal experimentation has long been a controversial issue with impassioned arguments on both sides of the debate Increasingly it has become more expedient and feasible to develop new methods that avoid the use of animals There is agreement on both sides that reduction and refinement of experiments on animals should be an important goal for the industries involved Alternatives to Animal Testing written by leading experts in the field discusses the issues involved and approaches that can be taken Topics include the safety evaluation of chemicals international validation and barriers to the validation of alternative tests in vitro testing for endocrine disruptors intelligent approaches to safety evaluation of chemicals alternative tests and the regulatory framework The book provides an up to date discussion of the current state of development of alternatives to animal testing and is ideal for professionals and academics in the field It would also be of use for graduate students wishing to pursue a career in the pharmaceutical and cosmetic industries

other greenhouse gases in the atmosphere Methods of capturing and then storing CO₂ from major sources such as fossil fuel burning power plants are being developed to reduce the levels emitted to the atmosphere by human activities Carbon Capture Sequestration and Storage reports on progress in this field and provides a context within the range of natural absorption processes in the oceans and forests and in soil Comparisons with alternative energy sources such as solar and nuclear are made and policy issues also are reviewed The book is very topical as its subject matter impacts on the lives of all of us It is multi authored by experts ensuring its authoritative coverage across the full range of this highly technical but mainstream subject It contains cutting edge science and technology presented in a highly readable form along with an extensive bibliography
