in the Classroom Berry Billingsley, Manzoorul Abedin, Keith Chappell, 2018-01-29 A Teacher's Guide to Science and Religion in the Classroom provides practical guidance on how to help children access positive ways of thinking about the relationship between science and religion. Written for teachers of children from diverse faith and non faith backgrounds it explores key concepts, identifies gaps and common misconceptions in children's knowledge and offers advice on how to help them form a deeper understanding of both science and religion. Drawing on the latest research as well as the designs of successful workshops for teachers and for children there are activities in each chapter that have been shown to help children understand why science and religion do not necessarily conflict. The book highlights children's interest in the so called Big Questions that bridge science and religion and responds to the research finding that most children are missing ideas that are key to an explanation of why science and religion can be harmonious. The book explores key concepts and ideas including Nature of science, Power and limits of science, Evolution, genes and human improvement, Miracles, natural disasters and mystery, Profiles of scientists including Galileo and Newton. A Teacher's Guide to Science and Religion is an essential companion for preservice and practising teachers providing session plans and pedagogic strategies together with a cohesive framework that will support teachers in fostering children's curiosity and enthusiasm for learning.

Science Education in East Asia Myint Swe Khine, 2015-09-03 This book presents innovations in teaching and learning science, novel approaches to science curriculum, cultural and contextual factors in promoting science education and improving the standard and achievement of students in East Asian countries. The authors in this book discuss education reform and science curriculum changes and promotion of science and STEM education, parental roles and involvement in children's education, teacher preparation and professional development and research in science education in the context of international benchmarking tests to measure the knowledge of mathematics and science such as the Trends in Mathematics and Science Study (TIMSS) and achievement in science, mathematics and reading like Programme for International Student Assessment (PISA). Among the high achieving countries the performance of the students in East Asian countries such as Singapore, Taiwan, Korea, Japan, Hong Kong and China, Shanghai are notable. This book investigates the reasons why students from East Asian countries consistently claim the top places in each and every cycle of those study. It brings together prominent science educators and researchers from East Asia to share their experience and findings, reflection and vision on emerging trends, pedagogical innovations and research informed practices in science education in the region. It provides insights into effective educational strategies and development of science education to international readers.

Teachers Creating Context-Based Learning Environments in Science R. Taconis, den Brok P., 2016-10-26 Context based science education has led to the transformation of science education in countries all over the world with changes also visible in learning environments and how these are being shaped. These changes involve authentic problems on research and design, new types of interactions within communities of practice, new content areas and also new challenges for teachers in teaching, motivating, scaffolding and assessing their

students among other things This book focuses on context based science education and its resulting changes in the perspective of research on learning environments It also focuses on the implications for the teachers and the professional development of their competencies and beliefs The book consists of eleven chapters by experts in various themes surrounding learning environments research and science education preceded by and concluded with a chapter with reflections on context based learning environments in science by the editors of this book The conclusion they draw is that professional development of science teachers may be the most important and the most difficult part of the process of teachers creating context based learning environments in science as is the focus in the title of this book
