## Matter—Properties and Changes

### Section 3.1 Properties of Matter

In your textbook, read about physical properties and chemical properties of matter.

Use each of the terms below just once to complete the passage.

chemical density	mass properties	physical substance
---------------------	--------------------	-----------------------

Matter is anything with (1) mass and volume. A (2) substance is a form of matter with a uniform and unchanging composition. Substances have specific, unchanging (3) properties that can be observed. Substances have both physical and chemical properties. (4) Physical properties can be observed without changing a substance's chemical composition. Color, hardness, and (5) density are examples. Other properties cannot be observed without changing the composition of a substance. These are called (6) chemical properties. An example is the tendency of iron to form rust when exposed to air.

Label each property as either physical or chemical.

discusses many of Wordsworth's later poems comparing his work with that of his regional contemporaries as well as major writers such as Scott. The key theme of relationship both between characters within poems and between poet and reader is explored through Wordsworth's construction of community and his use of power relationships. A serious discussion of the place of sexual feeling in his writing is also included.

This is a practically

oriented text that utilizes current issues as a way to engage students and illustrate the relevance and importance of assessment. This text focuses on a teacher's needs and on assessment solely in the classroom environment. Since many assessment texts today are written by experts in statistics and cover the topic of assessment in many settings with complicated terminology, the practical approach of *ASSESSMENT IN THE CLASSROOM* appeals to instructors who find it difficult to get their students interested in the subjects of testing and measurement. The authors detail traditional testing methods as well as newer forms of alternative assessment which evaluates students on their abilities to use their knowledge in realistic situations. Areas covered include the history of measurement in education, basic concepts, how to assess what to assess, assessment procedures and external testing programs as well as how to set up and measure the latest portfolio assessment method. Many sample forms and examples of various types of assessment provided.
