NAME _____

HOUR _____

STANDARD 1 LEARNING MODULE 10

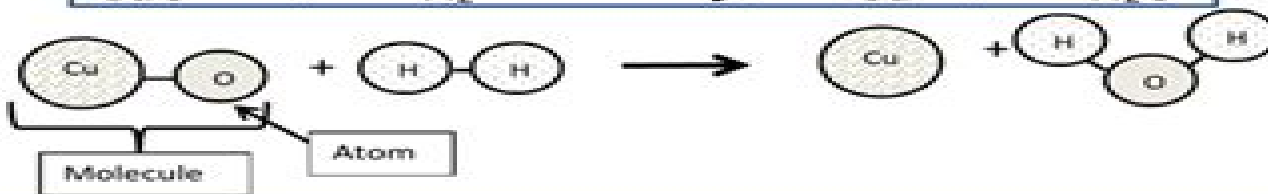

Background Information and Why: Chemical reactions can be described by chemical equations. Equations means equal. One each side of the equal side, also known as "yields", the number AND type of atoms are exactly the same. The Law of Conservation of Mass states that the atoms cannot be created or destroyed. The atoms can only be rearranged into different molecules/substances. Atoms are the building blocks of molecules. Therefore, in order to obey The Law of Conservation of Mass, the number of atoms for each element must be the same in the reactants (left side) as it is in the products (right side). In order to balance equations we cannot split or add to existing molecules. We can change the coefficient, adding molecules. We cannot change the subscripts, the small numbers, because they determine how many atoms are in a molecule.

Principles of Redox Reactions Malika Ammam,2018-03-05 As a teacher of physical chemistry I noticed that students even in advanced classes have difficulties in understanding the basics of redox chemistry In this Section 3 I attempted to discuss some fundamental principles related to redox processes by focusing on the species that might lose or gain electrons determination of the oxidation numbers or states of atoms in compounds and ways of balancing redox reactions To further clarify the discussed concepts numerous questions and problems with detailed answers are provided Most of these questions are formulated by students like you I believe that this Section 3 would greatly help students with levels varying from high school to advanced university classes
