Green Chemical Analysis and Sample Preparations Mahmoud H. El-Maghrabey, V. Sivasankar, Rania N. El-Shaheny, 2022-06-20 This volume focuses on the most recent trends for greening analytical activities beginning with an introduction to green analytical chemistry followed by a discussion of green analytical chemistry metrics and life cycle assessment approach to analytical method development The chapters discuss two main topics first is the most recent techniques for greening sample pretreatment steps and second is modern trends for tailoring analytical techniques and instrumentation to implement the green analytical chemistry concept The role of different kinds of green solvents such as ionic liquids supercritical fluids deep eutectic solvents bio based solvents and surfactants as well as nanomaterials and green sorption materials in greening sample extraction steps is also a focus of this book Furthermore

different approaches for greening chromatography as a key analytical technique are discussed The applications of nanomaterials in analytical procedures are deeply reviewed and miniaturization of spectrometers is also discussed as a recently evolved approach for efficient green on site analysis This book will appeal to a wide readership of academic and industrial researchers in different fields It can be used in the classroom for undergraduate and postgraduate students focusing on the development of new analytical procedures for organic and inorganic compounds determination in different kinds of samples characterized by complex matrices composition The book will also be useful for researchers that are interested in both chemical analysis and environment protection

Green and Sustainable Medicinal Chemistry Louise Summerton, Helen F Sneddon, Leonie C

Jones, James H Clark, 2016-03-08 Pharmaceutical manufacturing was one of the first industries to recognize the importance of green chemistry with pioneering work including green chemistry metrics and alternative solvents and reagents. Today other topical factors also have to be taken into consideration such as rapidly depleting resources, high energy costs, and new legislation. This book addresses current challenges in modern green chemical technologies and sustainability thinking. It encompasses a broad range of topics covered by the CHEM21 project, Europe's largest public-private partnership project, which aims to develop a toolbox of sustainable technologies for green chemical intermediate manufacture. Divided into two sections, the book first gives an overview of the key green chemistry tools, guidance, and considerations aimed at developing greener processes, before moving on to look at cutting-edge synthetic methodologies. Featuring innovative research, this book is an invaluable reference for chemists across academia and industry wanting to further their knowledge and understanding of this important topic.
