Introduction to Software for Chemical Engineers Mariano Martín Martín, 2014-07-01 The field of chemical engineering is in constant evolution and access to information technology is changing the way chemical engineering problems are addressed Inspired by the need for a user friendly chemical engineering text that demonstrates the real world applicability of different computer programs Introduction to Software for Chemical Engi **Integrated Chemical** Processes in Liquid Multiphase Systems Matthias Kraume, Sabine Enders, Anja Drews, Reinhard Schomäcker, Sebastian Engell, Kai Sundmacher, 2022-06-21 Liquid multiphase processes represent a promising option for realizing novel efficient and sustainable production processes as required for the transformation towards climate neutral manufacturing processes This volume presents the results obtained over twelve years in the DFG funded collaborative project Transregio 63 Integrated Chemical Processes in Liquid Multiphase Systems In an interdisciplinary approach to the design and operation of such processes essential principles of Green Chemistry are realized such as using long chain olefins as model representatives of renewable raw materials highly efficient catalysts and green solvents linked with process optimization to improve energy and material efficiency Experts from different fields addressed all steps of the development process from the description of the reactions on the molecular level via thermodynamics and the design of efficient separation processes to the operation of entire miniplants for liquid multiphase production processes Thus the complete development chain from the first reaction related investigations in the laboratory to the technological realization in miniplants with model based control is demonstrated Numerous methodological innovations are proposed and validated using several innovative phase systems thermomorphic multiphase systems microemulsion systems Pickering emulsions and homogeneously catalyzed reactions Engineers and chemists from the chemical industry as well as advanced students and researchers will get valuable insights into the physico chemical phenomena in chemical multiphase processes and benefit from recommendations concerning methods for the selection of phase systems and rapid model based process development Integrative Learning of Theory and Practice Mariana Orozco, 2022-02-14 This book addresses the questions of what constitutes the integrative learning of theory and practice ILTP and how this learning progresses over time these are important questions that have been overlooked to date It introduces a new way of looking at the theory practice integration and presents the conceptual and

empirical research that has led to such a view The conceptualisation of the ILTP and the description of the phenomenon of integration draw on psychological aspects of epistemological beliefs in TVET and on philosophical aspects of social reasoning In this inferentialist non dualistic epistemological perspective theory and practice are distinguished in terms of their use in reasoning rather than as intrinsically different forms of knowledge In particular the integrative learning is presented in terms of qualitative changes in chains of reasoning that connect theoretical and practical considerations This work represents a contribution to further educational research as it advances a novel operationalisation of the inferentialist framework Finally this work contributes to educational practice as it offers evidence based guidelines for practitioners concerned with instructional design in TVET The reported empirical investigations involved in depth qualitative research methods and were conducted at a micro level of instruction in alternating school based and work based programmes in the field of Chemicals Processing Technology CPT Distillation Andrzej Gorak, Eva Sorensen, 2014-07-22 Distillation Fundamentals and Principles winner of the 2015 PROSE Award in Chemistry Physics is a single source of authoritative information on all aspects of the theory and practice of modern distillation suitable for advanced students and professionals working in a laboratory industrial plants or a managerial capacity It addresses the most important and current research on industrial distillation including all steps in process design feasibility study modeling and experimental validation together with operation and control aspects This volume features an extra focus on the conceptual design of distillation Winner of the 2015 PROSE Award in Chemistry Physics from the Association of American Publishers Practical information on the newest development written by recognized experts Coverage of a huge range of laboratory and industrial distillation approaches Extensive references for each chapter facilitates further study Solutions for Sustainable Development Klára Szita Tóthné, Károly Jármai, Katalin Voith, 2019-09-19 The first International Conference on Engineering Solutions and Sustainable Development which is organized by the University of Miskolc Hungary is a significant and timely initiative creating the capacity of engineering students educators practicing engineers and industries to demonstrate values problem solving skills knowledge and attitude that are required to apply the principles of sustainable development throughout their professional career The aim of the ICESSD conference was creating an interdisciplinary platform for researchers and practitioners to present and discuss the most recent innovations trends and concerns as well as practical challenges encountered and solutions adopted in the fields of Technical and Environmental Science The conference covers the following topics Process Engineering Modelling and Optimisation Sustainable and Renewable Energy and Energy Engineering Waste Management and Reverse Logistics Environmental Management and Ecodesign Circular Economy and Life Cycle Approaches Smart Manufacturing and Smart Buildings Innovation and Efficiency Earth Science Academics scientists researchers and professionals from different countries and continents have contributed to this book Biofuels Ram Sarup Singh, Ashok Pandey, Edgard Gnansounou, 2016-11-10 This will be a comprehensive multi contributed reference work with the Editors being highly

regarded alternative fuels experts from India and Switzerland There will be a strong orientation toward production of biofuels covering such topics as biodiesel from renewable sources biofuels from biomass vegetable based feedstocks from biofuel production global demand for biofuels and economic aspects of biofuel production Book covers the latest advances in all product areas relative to biofuels Discusses coverage of public opinion related to biofuels Chapters will be authored by world class researchers and practitioners in various aspects of biofuels Provides good comprehensive coverage of biofuels for algae Presents extensive discussion of future prospects in biofuels Industrial Chemical Process Analysis and Design Mariano Martín Martín, 2016-07-02 Industrial Chemical Process Analysis and Design uses chemical engineering principles to explain the transformation of basic raw materials into major chemical products The book discusses traditional processes to create products like nitric acid sulphuric acid ammonia and methanol as well as more novel products like bioethanol and biodiesel Historical perspectives show how current chemical processes have developed over years or even decades to improve their yields from the discovery of the chemical reaction or physico chemical principle to the industrial process needed to yield commercial quantities Starting with an introduction to process design optimization and safety Martin then provides stand alone chapters in a case study fashion for commercially important chemical production processes Computational software tools like MATLAB Excel and Chemcad are used throughout to aid process analysis Integrates principles of chemical engineering unit operations and chemical reactor engineering to understand process synthesis and analysis Combines traditional computation and modern software tools to compare different solutions for the same problem Includes historical perspectives and traces the improving efficiencies of commercially important chemical production processes Features worked examples and end of chapter problems with solutions to show the application of concepts discussed in the text **CHEMCAD** Chemstations (Firm).2008
