Oxidation Leaching of Copper Sulfides in Ammoniacal Pulps at Elevated Temperatures and Pressures Martin H. Stanczyk, Carl Rampacek, 1966 The Bureau of Mines investigated leaching of selected copper sulfide minerals and a composite of impure flotation concentrates at elevated temperatures and pressures with ammoniacal solutions Copper extractions of 96 percent were obtained by leaching chalcopyrite at 75 C under oxidizing conditions for 60 minutes An extraction of 99 percent of the copper contained in the composite concentrate was obtained by leaching the product for 90 minutes at 75 C In tests of bornite chalcocite and covellite 90 to 97 percent of the copper was extracted at 20 C provided an 8 hour reaction period was used At 75 C essentially complete dissolution of the copper from these three minerals was accomplished in 60 minutes

Mulaba-Bafubandi, 2024-04-24 Recovery of Values from Low Grade and Complex Minerals The book elaborates on various physicochemical properties of minerals and technological developments to improve the recovery of metals while ensuring cost effectiveness and minimal environmental impact The mineral industry is undergoing significant cultural organizational and technological transformations to address

some of the major limitations and challenges related to the environmental and productivity domains As far as productivity is concerned the decrease of high grade ores has been one of the stumbling blocks toward the achievement of maximum recovery of metals while on the other hand the complexity of minerals therein makes it difficult to profitably extract metals using only conventional methods This book presents eight specialized chapters that focus on the exploration of the complexity of minerals that are likely to negatively influence the recovery of values as well as the development of adequate technologies capable of improving the process of mineral concentration and or metal recovery from complex minerals in a sustainable manner It reviews the various physicochemical properties of minerals that are likely to pose a challenge during the attempt to recover values using conventional methods It also elaborates on the recent technological development that has been considered by researchers to improve the recovery of metals from gangue dominated minerals while ensuring cost effectiveness and minimal adverse environmental impact Audience This book will be of interest to academic researchers from the fields of mineral processing hydrometallurgy geochemistry environment chemistry engineering and professionals including mining plant operators environmental managers in the industries government regulatory bodies officers and environmentalists *High-temperature Corrosion Studies* Robert M.
