

## Answer Key for Chemical Equilibria

1. Equilibrium constant expressions are always written as showing a ratio of products over reactants. Here is a general format for a generic equilibrium:

The equilibrium constant,  $K_c$ , has the ratio expressed as molar concentrations:

$$K_c = \frac{[A]^a [B]^b}{[C]^c [D]^d}$$

The equilibrium constant,  $K_c$ , is called an analytical equilibrium constant and it is applied to an analytical equilibrium constant expression. The analytical equilibrium constant expression will only include those components in the equilibrium that are in the same phase. Solids are never included because one cannot measure the concentration of a solid.

The equilibrium constant,  $K_p$ , is applied to gas phase equilibria. The equilibrium constant expression is expressed as a ratio in terms of the partial pressures of the gaseous components. Applying this to the same equilibrium above, assuming A, B, C and D are all gases:

$$K_p = \frac{P_C^c \cdot P_D^d}{P_A^a \cdot P_B^b}$$

Use these concepts to write the equilibrium constant expressions for the equilibria in this question:

This is a homogeneous equilibrium, meaning all the components are in the same phase, in this case, the gas phase. Thus, we can write both a  $K_c$  expression and a  $K_p$  expression:

$$K_c = \frac{[N_2H_4]}{[N_2] [H_2]^2} \quad \text{and} \quad K_p = \frac{P_{N_2H_4}}{P_{N_2} \cdot P_{H_2}^2}$$

This is also a homogeneous equilibrium, thus we can write both a  $K_c$  expression and  $K_p$  expression:

$$K_c = \frac{[PF_5] [F_2]}{[PF_3]} \quad \text{and} \quad K_p = \frac{P_{PF_5} \cdot P_{F_2}}{P_{PF_3}}$$

This is a heterogeneous equilibrium. Solids are never included in the equilibrium constant expressions, so we will only include the gases in this equilibrium. Since gases are involved, we are able to write both a  $K_c$  and  $K_p$  equilibrium constant expression:

$$K_c = \frac{[Cl_2]^2}{[SiCl_4] [H_2O]^2} \quad \text{and} \quad K_p = \frac{P_{Cl_2}^2}{P_{SiCl_4} \cdot P_{H_2O}^2}$$

University Chemistry James G. Anderson, 2022-05-10. A new approach to teaching university-level chemistry that links core concepts of chemistry and physical science to current global challenges. Introductory chemistry and physics are generally taught at the university level as isolated subjects divorced from any compelling context. Moreover, the formalism-first teaching approach presents students with disembodied knowledge, abstract and learned by rote. By contrast, this textbook presents a new approach to teaching university-level chemistry that links core concepts of chemistry and physical science to current global challenges. It provides the rigorous development of the principles of chemistry but places these core concepts in a global context to engage developments in technology, energy production and distribution, the irreversible nature of climate change, and national security. Each chapter opens with a Framework section that establishes the topic's connection to emerging challenges. Next, the Core section addresses concepts including the first and second law of thermodynamics, entropy, Gibbs free energy, equilibria, acid-base reactions, electrochemistry, quantum mechanics, molecular bonding, kinetics, and nuclear. Finally, the Case Studies section explicitly links the scientific principles to an array of global issues. These case studies are designed to build quantitative reasoning skills, supply the technology background, and illustrate the critical global need for the infusion of technology into energy generation. The text's rigorous development of both context and scientific principles equips students for advanced classes as well as future involvement in scientific and societal arenas. *University Chemistry* was written for a widely adopted course created and taught by the author at Harvard.
