Modelling Learners and Learning in Science Education Keith S. Taber, 2013-12-11 This book sets out the necessary processes and challenges involved in modeling student thinking understanding and learning

The chapters look at the centrality of models for knowledge claims in science education and explore the modeling of mental processes knowledge cognitive development and conceptual learning The conclusion outlines significant implications for science teachers and those researching in this field This highly useful work provides models of scientific thinking from different field and analyses the processes by which we can arrive at claims about the minds of others The author highlights the logical impossibility of ever knowing for sure what someone else knows understands or thinks and makes the case that researchers in science education need to be much more explicit about the extent to which research onto learners ideas in science is necessarily a process of developing models Through this book we learn that research reports should acknowledge the role of modeling and avoid making claims that are much less tentative than is justified as this can lead to misleading and sometimes contrary findings in the literature In everyday life we commonly take it for granted that finding out what another knows or thinks is a relatively trivial or straightforward process We come to take the mental register the way we talk about the contents of minds for granted and so teachers and researchers may readily underestimate the challenges involved in their work

Harmonization of Leaching/Extraction Tests L. Heasman,H.A. van der Sloot,Ph. Quevauviller,1997-06-10 This is a unique compilation on the use of leaching extraction methods in different fields The use of leaching test methods is increasing in various areas including waste treatment and disposal incineration of waste soil clean up and reuse of cleaned soil sludge treatment This has led to and may increasingly lead to the development of a large number of very similar tests in these different fields However these developments are taking place with no clear understanding of their mutual relationships In view of these developments efforts are needed to harmonize the leaching procedures that could be adapted for different matrices as well as validate the use of existing tests in other fields The development of a wide variety of leaching extraction tests for different

matrices is undesirable from a regulatory point of view and undesirable for industry Clarity in testing is crucial in producer consumer relations This collective document will assist in improving the understanding of leaching from a variety of sources and will where appropriate help to bring together the approaches used in different technical fields and in different countries
