Applying Multiple-Reaction Stoichiometry to Chemical Reactor Modelling Guillermo Fernando Barreto, Carlos Daniel Luzi, 2024-03-12 This book delves into the realm of Chemical Reaction Engineering CRE by showcasing the practical application of multiple reaction stoichiometry. The authors critically assess various approaches commonly taught in undergraduate CRE courses to establish the relationships between changes in chemical species. In doing so they propose an innovative conceptual alternative that is specifically tailored for undergraduate lectures. The book carefully selects composition measures that effectively harness the power of stoichiometric relationships in elementary reacting systems and models which are typically covered in these courses. Going beyond the basics it also offers a profound discussion on the value of chemical stoichiometry for tackling more intricate reaction systems and detailed models. Moreover the book presents a simplified procedure that minimizes the reliance on complex linear algebra techniques making the book accessible to a wider range of readers.

Problem Solving in Chemical Reactor Design Juan A. Conesa, 2024-12-23 Extensive workbook with more than 200 up to date solved problems on advanced chemical reactors for deeper understanding of chemical reactor design. Problem Solving in Chemical Reactor Design provides in depth coverage of more than 200 solved complex reactor design problems extracted from core chemical engineering subject areas. The problems in this book cover the design of non ideal catalytic multiphase heterogeneous and biochemical reactors rather than focusing on basic Chemical Reactor Engineering concepts. Each complex problem is solved using simple procedures and mathematical tools enabling readers to better understand the correct procedure for solving problems and solve them faster more conveniently and more accurately. This book is inspired by more than two decades of the author's teaching experience in chemical reactor engineering. Accompanying electronic materials include spreadsheets and easily understandable Matlab programs which can both be downloaded from the Wiley website. Some of the topics covered in Problem Solving in Chemical Reactor Design include Optimization operation and complexities of reactor design in the face of non idealities such as mixing issues and residence

time distributions Utilization of the tanks in series model dispersion model and intricate combinations of ideal reactors to elucidate the impact on conversion rates Signal processing within the domain of chemical reactor engineering specifically focusing on convolution and deconvolution methodologies Reaction kinetics diffusion dynamics and catalyst efficiency in catalytic reactor design and design of gas catalytic and gas liquid solid catalyst systems in multiphase reactors Problem Solving in Chemical Reactor Design is an excellent learning resource for students and professionals in the fields of chemical engineering pharmaceuticals biotechnology and fine chemistry **Chemical Reactor Design and Technology** Hugo de Lasa, 2012-12-06 Today's frustrations and anxieties resulting from two energy crises in only one decade show us the problems and fragility of a world built on high energy consumption accustomed to the use of cheap non renewable energy and to the acceptance of existing imbalances between the resources and demands of countries Despite all these stressing factors our world is still hesitating about the urgency of undertaking new and decisive research that could stabilize our future Could this trend change in the near future In our view two different scenarios are possible A renewed energy tension could take place with an unpredictable timing mostly related to political and economic factors This could bring again scientists and technologists to a new state of shock and awaken our talents A second interesting and beneficial scenario could result from the positive influence of a new generation of researchers that with or without immediate crisis acting both in industry and academia will face the challenge of developing technologies and processes to pave the way to a less vulnerable society Because Chemical Reactor Design and Technology activities are at the heart of these required new technologies the timeliness of the NATO Advanced Study Institute at the University of Western Ontario London was very appropriate
