Handbook of Formulating Dermal Applications Nava Dayan, 2016-12-07 The conceptualization and

formulation of skin care products intended for topical use is a multifaceted and evolving area of science. Formulators must account for myriad skin types, emerging opportunities for product development as well as a very temperamental retail market. Originally published as *Apply Topically* in 2013, now out of print, this reissued detailed and comprehensive handbook offers a practical approach to the formulation chemist's day-to-day endeavors by addressing the innumerable challenges facing the chemist both in design and at the bench, such as formulating with for specific properties, formulation processing and production techniques, sensory and elegance, stability and preservation, color cosmetics, sunscreens. Offering valuable guidance to troubleshooting issues regarding ingredient selection and interaction, regulatory concerns that must be addressed early in development and the extrapolation of preservative systems, fragrances, stability and texture aids. Exploring the advantages and limitations of raw materials, addressing scale up and pilot production process and concerns, testing and measurements methods. The 22 chapters written by industry experts such as Roger L. McMullen, Paul Thau, Hemi Nae, Ada Polla, Howard Epstein, Joseph Albanese, Mark Chandler, Steve Herman, Gary Kelm, Patricia Aikens, and Sam Shefer, along with many others, give the reader and user the ultimate handbook on topical product development.

Cosmetics P. Elsner, Hans F. Merk, Howard I. Maibach, 2012-12-06. Together with the 6th Amendment Council Directive 93/35/EEC to the Cosmetic Directive 76/768/EEC, it was the first time that according to Article 7b, special claims of efficacy could be legally attributed to cosmetic products, but under the obligation to make evidence of the claimed effects. Also, an entirely new controller was introduced: the independent safety assessor. This indeed means not only progress in reliable and honest marketing arguments, but above all, transparency as to the respective proof and thus protection of consumer's health. Such claims demand high standards in scientifically based methodology and their results in order to prove such demands. Evidently, there are also within the 6th Amendment to the Cosmetic Directive in Article 4a, strict restrictions as to the further use of conventional animal testing for cosmetic products and their ingredients and especially for finished products. Without doubt, there is a competition between the necessity and expectations on consumer health on the one hand and the requirements of acknowledged protection of animals as done in Council Directive 86/609/EEC on the other. But at least based on the present state of knowledge, tests in human beings cannot replace animal testing in all instances. Not only ethical reasons alone prohibit or impede testing in humans, but also very often the lack of knowledge on functional and/or biological processes underlying observed effects, with the consequence that suitable experimental methodologies are missing.
