

Chemistry Penny Lab

Investigation of Intermolecular Forces

Chemistry is the study of the properties and interactions of matter. In this activity you will observe and quantitatively record a phenomenon that is a function of various forces acting on molecules in some liquid compounds. Observers will record the maximum number of drops that hold together on the surface of a penny.

Safety

- This lab will use flammable and toxic materials in manageable sizes.
- If you are unclear about any step, seek clarification before proceeding.
- Make sure to wear safety goggles and a lab apron.
- Keep the vials closed between uses.

Materials

1 vial of water
1 vial of isopropyl alcohol
1 vial of acetone
1 vial of heptane
4 disposable pipettes

1 penny
20 Q-tips
paper towels
Ziploc bag for waste

Procedure

1. **Prepare workspace:** During this lab always work over a clean paper towel. Locate the water vial and two Q-tips.
2. **Clean the penny surface:** Make sure your goggles are on at this point. Open the vial of water and dip one end of a Q-tip in it. Use a second dry Q-tip to hold the penny down while scrubbing it with the wet Q-tip. After scrubbing, wipe the penny dry with the second dry Q-tip, you can use both ends. Open the Ziploc bag and place both Q-tips in it. Repeat the entire process a second time. At all times do not touch any water during the process. This same technique will be used on the more hazardous liquids. Close the Ziploc bag containing the used Q-tips, consider it your mini fume hood.
3. **Measure the drop count:** Place the open vial of water near the penny. Draw water into the pipette until the barrel is mostly full. (The bulb part should remain empty). Keeping the pipette pointed straight downward, position it a few millimeters
