The Cannibal Within Lewis F. Petrinovich, *The Cannibal Within* offers an evolutionary account of the propensity of human beings in extreme circumstances to eat other human beings despite the strong Western taboo against such practices What sets this volume apart from the large body of literature on cannibalism both popular and anthropological is the underlying premise cannibalism as an alternative to starvation is tacitly condoned by the same biological morality that would condemn cannibalism of other sorts in non threatening situations Deep as the taboos may be the survival instinct runs even deeper The title of the book reflects the author's belief that cannibalism is not a pathology that erupts in psychotic individuals but is a universal adaptive strategy that is evolutionarily sound The cannibal is

within all of us and cannibals are within all cultures should the circumstances demand cannibalism's appearance and usage. Petrino's work is rich in historical detail and rises to a level of theoretical sophistication in addressing a subject too often dealt with in sensationalist terms. The major instances in which survival cannibalism has occurred convinced the author that there is a consistent pattern and a uniform regularity of order in which different kinds of individuals are consumed. In considering who eats whom when and under what circumstances this regularity appears and it is consistent with what would be expected on the basis of evolutionary or Darwinian theory. In short he concludes that starvation cannibalism is not a manifestation of the chaotic psychotic behavior of individuals who are driven to madness but reveals underlying characteristics of evolved human beings. Lewis Petrino is professor emeritus in the Department of Psychology of the University of California Riverside and is currently a resident of Berkeley California.

Lithic Technological Systems and Evolutionary Theory Nathan Goodale, William Andrefsky, Jr, 2015-01-22. Stone tool analysis relies on a strong background in analytical and methodological techniques. However lithic technological analysis has not been well integrated with a theoretically informed approach to understanding how humans procured, made and used stone tools. Evolutionary theory has great potential to fill this gap. This collection of essays brings together several different evolutionary perspectives to demonstrate how lithic technological systems are a by-product of human behavior. The essays cover a range of topics including human behavioral ecology, cultural transmission, phylogenetic analysis, risk management, macroevolution, dual inheritance theory, cladistics, central place foraging, costly signaling, selection, drift and various applications of evolutionary ecology.

In Search of the Broad Spectrum Revolution in Paleolithic Southwest Europe Emily Lena Jones, 2015-10-07. The people who inhabited Southwest Europe from 30,000 to 13,000 years ago are often portrayed as big game hunters and indeed in some locations, Cantabrian Spain, the Pyrenees, the Dordogne, the archaeological record supports this interpretation. But in other places, notably Mediterranean Iberia, the inhabitants focused their hunting efforts on smaller game such as rabbits, fish and birds. Were they less effective hunters? Were these environments depleted of red deer and other large game? Or is this evidence of Paleolithic people's adaptability? This volume explores these questions along the way, delving into the history of the bigger equals better assumption, optimal foraging theory and niche construction theory and patterns of environmental and subsistence change across the Pleistocene-Holocene transition.

Adaptation and Human Behavior Napoleon Chagnon, 2017-09-08. This volume presents state-of-the-art empirical studies working in a paradigm that has become known as human behavioral ecology. The emergence of this approach in anthropology was marked by publication by Aldine in 1979 of an earlier collection of studies edited by Chagnon and Irons entitled *Evolutionary Biology and Human Social Behavior: An Anthropological Perspective*. During the two decades that have passed since then, this innovative approach has matured and expanded into new areas that are explored here. The book opens with an introductory chapter by Chagnon and Irons tracing the origins of human behavioral ecology and its subsequent development. Subsequent chapters written by

both younger scholars and established researchers cover a wide range of societies and topics organized into six sections. The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches in the study of evolution and human behavior: evolutionary psychology and dual inheritance theory. The second section includes five studies of mating efforts in a variety of societies from South America and Africa. The third section covers parenting with five studies on societies from Africa, Asia, and North America. The fourth section breaks somewhat with the tradition in human behavioral ecology by focusing on one particularly problematic issue: the demographic transition, using data from Europe, North America, and Asia. The fifth section includes studies of cooperation and helping behaviors using data from societies in Micronesia and South America. The sixth and final section consists of a single chapter that places the volume in a broader critical and comparative context. The contributions to this volume demonstrate with a high degree of theoretical and methodological sophistication the maturity and freshness of this new paradigm in the study of human behavior. The volume will be of interest to anthropologists and other professions working on the study of cross-cultural human behavior.

The Oxford Handbook of Evolutionary Family Psychology Catherine Salmon, Todd K. Shackelford, 2011-05-27. Relationships with family are important to our emotional health and can play a significant role in our social success. We need our families and yet frequently have a great difficulty understanding them. Hundreds of books have been published with the goal of improving understanding and relationships among family and relationships; few, if any, have done so with an evolutionary approach. *The Oxford Handbook of Evolutionary Family Psychology* focuses on the reasons underlying family behavior and how a greater understanding of these factors can help us to better understand our own family behaviors. Recognizing that a deeper understanding of human families can be found through an understanding of similar phenomena in other species, the volume demonstrates how an understanding of family ties can inform understanding of our relationships to non-kin.
