What are some major characteristics of the Mesozoic Era?
Age of the dinosaurs, first mammals and birds appeared. First Flowering plants and first primates. Ended with dinosaur extinction

Part 2: Relative Dating

Vocabulary:

Index Fossils – fossils used by geologists to date the age of rock layers.

Geologic Column – a non-existing model of the Earth's rock layers pieced together from multiple locations.

Law of Superposition – sedimentary rock layers on top are younger than rock layers on bottom.

Law of Cross Cutting Relationships – rock layers that cut through other rock layers are younger than the layers they cut through.

Law of Original Horizontality- sedimentary rocks are originally laid horizontally due to gravity. Any folds, bends, faults occur later and therefore are older than horizontal rock layers.

Inclusion/Intrusion – igneous rocks that are surrounded by other rock types, mainly due to lava/magma flows.

Unconformity – missing or irregular layering or shape. Mainly due to erosion, extremely folding from plate tectonic movement, or lava/magma flow melting/cutting through rock layers.

(U.S.),2011 This third edition of the SME Mining Engineering Handbook reaffirms its international reputation as the handbook of choice for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term; why such changes are inevitable; what this will mean in terms of challenges and how they could be managed; Explaining the mechanics associated with the multifaceted world of mine and mineral economics; from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash flow issues associated with mine planning at a mature operation; Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving, optimization, or process dewatering methods; Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking, whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner, or cast blasting at a surface coal operation; Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered; Discussing the impacts that social and environmental issues have on mining, from the pre-exploration phase to end-of-mine issues and beyond, and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders.

Start reinforcing a strong foundation for learning with study questions, discussions, discussion topics, and more for home and school educators. In this fascinating book, Gary Parker explores some of the most interesting areas of science: fossils, the errors of evolution, the evidence of creation, all about early man and human origins, dinosaurs, and even races.
