Digital And Parametric Architecture Carlo Aiello, 2014-12-01 Digital And Parametric Architecture explores the development of the latest digital tools including advance modeling software and computer aided design in the production of architecture It is a journey through the most fascinating projects digitally designed and fabricated during the second decade of the 21st century The book highlights the use of these technologies to explore tectonic operations such as sectioning folding contouring and tessellating A wide variety of projects that range in scale and location offer an insight into the architecture of the future The Routledge Companion to Contemporary Architectural History Duanfang Lu, 2023-07-31 The Routledge Companion to Contemporary Architectural History offers a comprehensive and up to date knowledge report on recent developments in architectural production and research Divided into three parts Practices Interrogations and Innovations this book charts diversity criticality and creativity in architectural interventions to meet challenges and enact changes in different parts of the world through featured exemplars and fresh theoretical orientations The collection features 29 chapters written by leading architectural scholars and highlights the reciprocity between the historical and the contemporary research and practice and disciplinary and professional knowledge Providing an essential map for navigating the complex currents of contemporary architecture the Companion will interest students academics and practitioners who wish to bolster their understanding of built environments **Computer-Aided Architectural Design: The Next City - New Technologies and the Future of the Built Environment** Gabriela Celani, David Moreno Sperling, Juarez Moara Santos Franco, 2015-06-15 This book constitutes the refereed proceedings of the 16th International Conference on Computer Aided Architectural Design Futures CAAD Futures 2015 held in S o Paulo Brazil in July 2015 The 33 revised full papers presented were carefully reviewed and selected from 200 submissions The papers are organized in topical sections on modeling analyzing and simulating the city sustainability and performance of the built space automated and parametric design building information modelling BIM fabrication and materiality shape studies **Architecture Xenoculture** Juan Azulay, Benjamin Rice, Carlo Aiello, 2014-01-01 Xenoculture is a term coined by Iranian writer and philosopher Reza Negarestani that describes the need for embracing and exploring the unexpected the alien In this issue we borrow the idea and explore the realm of Architecture Xenoculture the work of architects and designers who detach from everything that architecture is supposed to be and look like including preconceived forms and aesthetics to look into new architectural and design possibilities An architectural form that emerges from mathematical processes and new material explorations and proposes something never before seen an aesthetic yet to be determined Some of the work showcased has been produced by leading architecture practitioners and academics worldwide including Hernan Diaz Alonso Servo Francois Roche Marc Fornes Kokkugia Zaha Hadid Volkan Alkanoglu and Rafael Lozano among others Architecture Xenoculture is the problematization of work produced by embracing the proliferation of this mist of fear It argues for the harnessing of this

aesthetic of fear towards a yet to be determined end intensifying its practice towards new thresholds those that unleash the potential of the alien in the world beyond the limited imaginary we have become anesthetized to conjuring insecure material and behavioral manifestations of the xeno gene and its ability to adapt mutate survive and fight Architecture in the Age of Artificial Intelligence Neil Leach, 2021-11-18 Artificial intelligence is everywhere from the apps on our phones to the algorithms of search engines Without us noticing the AI revolution has arrived But what does this mean for the world of design The first volume in a two book series Architecture in the Age of Artificial Intelligence introduces AI for designers and considers its positive potential for the future of architecture and design Explaining what AI is and how it works the book examines how different manifestations of AI will impact the discipline and profession of architecture Highlighting current case studies as well as near future applications it shows how AI is already being used as a powerful design tool and how AI driven information systems will soon transform the design of buildings and cities Far sighted provocative and challenging yet rooted in careful research and cautious speculation this book written by architect and theorist Neil Leach is a must read for all architects and designers including students of architecture and all design professionals interested in keeping their practice at the cutting edge of technology *3D-Printed Body Architecture* Neil Leach, Behnaz Farahi, 2018-02-01 Some architects dream of 3D printing houses Some even fantasise about 3D printing entire cities But what is the real potential of 3D printing for architects This issue focuses on another strand of 3D printing practice emerging among architects operating at a much smaller scale that is potentially more significant Several architects have been working with the fashion industry to produce some exquisitely designed 3D printed wearables Other architects have been 3D printing food jewellery and other items at the scale of the human body But what is the significance of this work And how do these 3D printed body scale items relate to the discipline of architecture Are they merely a distraction from the real business of the architect Or do they point towards a new form of proto architecture like furniture espresso makers and pavilions before them that tests out architectural ideas and explores tectonic properties at a smaller scale Or does this work constitute an entirely new arena of design In other words is 3D printing at the human scale to be seen as a new genre of body architecture This issue contains some of the most exciting work in this field today and seeks to chart and analyse its significance Contributors include Paola Antonelli MoMA Francis Bitonti Niccolo Casas Behnaz Farahi Madeline Gannon Eric Goldemberg MONAD Studio Kyle von Hasseln 3D Systems Culinary Lab Rem D Koolhaas Julia K rner Neil Leach Steven Ma Xuberance Neri Oxman MIT Media Lab Ronald Rael and Virginia San Fratello Gilles Retsin Jessica Rosenkrantz Nervous System and Patrik Schumacher Zaha Hadid Architects **Paradigms in Computing** David Jason Gerber, Mariana Ibanez, 2015-01-01 Paradigms in Computing Making Machines and Models for Design Agency in Architecture brings together critical theoretical and practical research and design that illustrates the plurality of computing approaches within the broad spectrum of design and mediated practices It is an interrogation of our primary field of architecture through the lens of computing and yet one that realizes a productive

expanding of our m tier s definition and boundaries It is a compilation that purposefully promotes architecture s disciplinary reach and incorporations beyond the design and construction of buildings and cities The book offers a glimpse into the wide range of positions and experiences that are shaping practice and discourse today The work included in Paradigms in Computing is evidence that models for enquiry are many and proliferating As digitalization and computation continue to infuse our processes with new tools and new design environments some of the trends collected in this book will continue to be central to the production and speculation of architecture and others will in retrospect be recognized as the seeds of new or perhaps multiple paradigms Included are essays and projects from Alisa Andrasek Rachel Armstrong Philip Beesley Tom Bessai Shajay Bhooshan Brad Cantrel Matias Del Campo Pablo Eiroa Marc Fornes David Jason Gerber Maria Paz Gutierrez Alvin Huang Jason Kelly Johnson Simon Kim Neil Leach Greg Lynn Elena and Anna Maria Manferdini Alex McDowell Phillippe Morel Nick Puckett Casey Reas Alex Robinson Jenny Sabin Jose Sanchez Patrik Schumacher Kyle Steinfeld Satoru Sugihara Orkan Telhan Kathy Velikov and Geoffrey Thun Tom Verebes Leire Asensio Villoria and David Mah Jenny Wu Eric Howeler and Meejin Yoon and Zaha Hadid Architects

Digital Architecture Beyond Computers Roberto Bottazzi, 2018-05-31 Digital Architecture Beyond Computers explores the deep history of digital architecture tracing design concepts as far back as the Renaissance and connecting them with the latest software used by designers today It develops a critical account of how the tools and techniques of digital design have emerged and allows designers to deepen their understanding of the digital tools they use every day What aesthetic spatial and philosophical concepts converge within the digital tools architects employ What is their history And what kinds of techniques and designs have they given rise to This book explores the answers to these questions showing how digital architecture brings together complex ideas and trajectories which span across several domains and have evolved over many centuries It sets out to unpack these ideas trace their origin and permeation into architecture and re examine their use in contemporary software Chapters are arranged around the histories of nine fragments each a fundamental concept embedded in popular CAD applications database layers and fields parametrics pixel programme randomness scanning topology and voxel maxel with each theme examined through a series of historical and contemporary case studies The book thus connects the digital design process with architectural history and theory allowing designers and theorists alike to develop more analytical and critical tools with which to conceptualise digital design and its software

Parametric Architecture Huei Sheng Yu, 2009 Current parametric design generates many possible solutions during modeling and design process but in the final stage only allows users to choose one solution to develop This thesis demonstrates a design strategy for physical parametric design that embeds knowledge from simulation tools and helps parametric design still keep variations after final model This thesis begins with an introduction of theory and practices of current parametric design and clarifies the connections between its methods and physical parametric design Then a few new concepts and prototypes are proposed and physical parametric designs are demonstrated The thesis

presents a series of case studies investigating specific parametric design methods Their objectives are studying ways to implement variations from parametric design to physical world and to fix parametric design s constraint problem through the use of physical feedback loop Some cases are related to simulation environment which can be used as a test platform for fabrication or responsive environment design others are different data access such as visualization Together these physical parametric design projects indicate how to solve the bidirectional constraint in design exploration Finally this paper evaluates new possibilities of this design strategy and construction method and discusses how the physical models impact digital parametric models key words parametric design Artificial Intelligence Knowledge Base Evolution system design simulation environment

Digital Wood Design Fabio Bianconi,Marco Filippucci,2019-02-24 This book explores various digital representation strategies that could change the future of wooden architectures by blending tradition and innovation Composed of 61 chapters written by 153 authors hailing from 5 continents 24 countries and 69 research centers it addresses advanced digital modeling with a particular focus on solutions involving generative models and dynamic value inherent to the relation between knowing how to draw and how to build Thanks to the potential of computing areas like parametric design and digital manufacturing are opening exciting new avenues for the future of construction The book s chapters are divided into five sections that connect digital wood design to integrated approaches and generative design to model synthesis and morphological comprehension to lessons learned from nature and material explorations to constructive wisdom and implementation related challenges and to parametric transfigurations and morphological optimizations
