**Neighborhood Project** David Sloan Wilson,2011-08-24 After decades studying creatures great and small evolutionary biologist David Sloan Wilson had an epiphany Darwin s theory won t fully prove itself until it improves the quality of human life in a practical sense And what better place to begin than his hometown of Binghamton New York Making a difference in his own city would provide a model for cities everywhere which have become the habitat for over half of the people on earth Inspired to become an agent of change Wilson descended on Binghamton with a scientist s eye and looked at its toughest questions such as how to empower neighborhoods and how best to teach our children He combined the latest research methods from experimental economics with studies of holiday decorations and garage sales Drawing upon examples from nature as diverse as water striders wasps and crows Wilson s scientific odyssey took him around the world from a cave in southern Africa that preserved the dawn of human culture to the Vatican in Rome Along the way he spoke with dozens of fellow scientists whose stories he relates along with his own Wilson s remarkable findings help us to understand how we must become wise managers of evolutionary processes to accomplish positive change at all scales from effective therapies for individuals to empowering neighborhoods to regulating the worldwide economy With an ambitious scope that spans biology sociology religion and economics The Neighborhood Project is a memoir a practical handbook for improving the quality of life and an exploration of the big questions long pondered by religious sages philosophers and storytellers Approaching the same questions from an evolutionary perspective shows as never before how places define us *Evolution Project* Personal Investment Authority (Great Britain),1996

2034 A.d.evolution 101 Textbook of the Future Jeff T. Bowles,2016-08-22 Best book on evolution yet written This is from a guy me who has literally read hundreds of book s on evolution I highly recommend this book to you if you are the slightest bit curious about evolution health or just the future of longevity I like this book so much I am buying and pushing this book on all my friends and family who have even a few neurons of interest in evolution or health A C An important scientific innovation rarely makes its way by gradually winning over and converting its opponents What does happen is that the opponents gradually die out Science advances one funeral at a time MP New scientific ideas never spring from a communal body however organized but rather from the head of an individually inspired researcher who struggles with his problems in lonely thought and unites all his thought on one single point which is his whole world for the moment Max Planck The evidence has been mounting for years and has been ignored by years by mainstream scientists that the selfish gene paradigm is woefully inadequate to explain much of what is observed in the world around us This book completes the theory of evolution to conclusively and simultaneously solve all the remaining conundrums and paradoxes that have been plaguing evolutionary theorists for decades such as the existence and purpose of of sex and aging male and female sex types and even homosexuality It is quite likely this will be the textbook for Evolution 101 in the year 2034 If this particular book is not used the ideas contained herein certainly will be Fun To Read Written in an easy to understand style for normal readers and scientists alike This radical new view of evolution leads to many shocking

conclusions about evolution's unexplained paradoxes. One chapter includes a detailed examination of how various human hormones change with aging and how the good hormones decline with age and how the bad hormones intentionally designed by evolution to kill you skyrocket after age 50 also included are ways to reverse this process. This book is full of beautiful thought provoking photos. This is a groundbreaking new look at and explanation of the mysteries of evolution that have been plaguing mainstream science since the first publication of Darwin's theory of evolution. Sex and aging have never had any satisfactory explanation within the Selfish Gene paradigm begun by Darwin and his disciples and popularized by Dawkins in his famous book *The Selfish Gene*. Aging and Sex are conclusively shown to be evolution's evolved defenses to evolving predation and in the absence of predation they will eventually become undone leading to a strange and bizarre world where humans eventually will evolve into a new asexual species. As bizarre as it sounds examples of many types of animals where asexual reproduction already occurs are provided including animals as complicated as turkeys, sharks and lizards. Homosexuality almost totally ignored by evolutionary biologists is examined and shown to also be a defense against evolving predation that acts as birth control for what evolution perceives as less fit predator stressed mothers. Even human religion as an evolved defense to famine and drought is explored and explained with a special emphasis on the high rate of religious suicide associated with various religions and cults. Sex and Aging are examined and shown to be species selected defenses to evolving predation that are being selected for at the local ecosystem level virtually everywhere and all the time.

Evolution from a Thermodynamic Perspective Carl F Jordan, 2022-11-28. Survival of the fittest is a tautology because those that are fit are the ones that survive but to survive a species must be fit. Modern evolutionary theory avoids the problem by defining fitness as reproductive success but the complexity of life that we see today could not have evolved based on selection that favors only reproductive ability. There is nothing inherent in reproductive success alone that could result in higher forms of life. Evolution from a Thermodynamic Perspective presents a non circular definition of fitness and a thermodynamic definition of evolution. Fitness means maximization of power output necessary to survive in a competitive world. Evolution is the storage of entropy. Entropy storage means that solar energy instead of dissipating as heat in the Earth is stored in the structure of living organisms and ecosystems. Part one explains this in terms comprehensible to a scientific audience beyond biophysicists and ecosystem modelers. Part two applies thermodynamic theory in non esoteric language to sustainability of agriculture and to conservation of endangered species. While natural systems are stabilized by feedback agricultural systems remain in a mode of perpetual growth pressured by balance of trade and by a swelling population. The constraints imposed by thermodynamic laws are being increasingly felt as economic expansion destabilizes resource systems on which expansion depends.
