Evolutionary Causation Tobias Uller, Kevin N. Lala, 2019-09-03 A comprehensive treatment of the concept of causation in evolutionary biology that makes clear its central role in both historical and contemporary debates Most scientific explanations are causal This is certainly the case in evolutionary biology which seeks to explain the diversity of life and the adaptive fit between organisms and their surroundings The nature of causation in evolutionary biology however is contentious How causation is understood shapes the structure of evolutionary theory and historical and contemporary debates in evolutionary biology have revolved around the nature of causation Despite its centrality and differing views on the subject the major conceptual issues regarding the nature of causation in evolutionary biology are rarely addressed This volume fills the gap bringing together biologists and philosophers to offer a comprehensive interdisciplinary treatment of evolutionary causation Contributors first address biological motivations for rethinking evolutionary causation considering the ways in which development extra genetic inheritance and niche construction

challenge notions of cause and process in evolution and describing how alternative representations of evolutionary causation can shed light on a range of evolutionary problems Contributors then analyze evolutionary causation from a philosophical perspective considering such topics as causal entanglement the commingling of organism and environment and the relationship between causation and information Contributors John A Baker Lynn Chiu David I Dayan Ren e A Duckworth Marcus W Feldman Susan A Foster Melissa A Graham Heikki Helanter Kevin N Lala Armin P Moczek John Odling Smee Jun Otsuka Massimo Pigliucci Arnaud Pocheville Arlin Stoltzfus Karola Stotz Sonia E Sultan Christoph Thies Tobias Uller Denis M Walsh Richard A Watson

Gauger, Wayne Grudem, 2020-06-20 Winner of the ECPA Book of the Year Award for Bible Reference Works Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life They argue that God used albeit in an undetectable way evolutionary mechanisms to produce all forms of life Featuring two dozen highly credentialed scientists philosophers and theologians from Europe and North America this volume contests this proposal documenting evidential logical and theological problems with theistic evolution making it the most comprehensive critique of theistic evolution yet produced Explains why theistic evolution is not congruent with a biblical worldview Features nineteen essays written by well known experts in their fields Designed to be used as a textbook for courses on religion and evolution Accessible for those without expertise in the subject [Encyclopedia of Anthropology](#) H. Economics as an Evolutionary Science Anna Sachko Gandolfi, 2018-02-06 Economics is traditionally taken to be the social science concerned with the production consumption exchange and distribution of wealth and commodities Economists carefully track the comings and goings of the human household whether written small microeconomics or large macroeconomics and attempt to predict future patterns under different situations However in constructing their models of economic behavior economists often lose sight of the actual characteristics and motivations of their human subjects In consequence they have found the goal of an explanatory and predictive science to be elusive Economics as an Evolutionary Science reorients economics toward a more direct appreciation of human nature with an emphasis on what we have learned from recent advances in evolutionary science The authors integrate economics and evolution to produce a social science that is rigorous internally coherent testable and consistent with the natural sciences The authors suggest an expanded definition of fitness as in Darwin's survival of the fittest emphasizing not only the importance of reproduction and the quality of offspring but also the unique ability of humans to provide material wealth to their children The book offers a coherent explanation for the recent decline in fertility which is shown to be consistent with the evolutionary goal of maximizing genetic success In addition the authors demonstrate the relevance to economics of several core concepts derived from biologists including the genetics of parent offspring conflict inclusive fitness theory and the phenomena of R selection and K selection The keystone of their presentation is a cogent critique of the traditional concept of utility As the authors demonstrate the concept can be modified to reflect the fundamental evolutionary principle whereby living things including human beings have been selected to behave in a manner that maximizes their genetic representation in future generations Despite the extraordinary interest in applying evolutionary biology to other disciplines Economics as an Evolutionary Science marks the first major attempt at a synthesis of biology and economics Scholarly yet accessible this volume offers unique and original perspectives on an entire discipline
