Cleophas, A.H. Zwinderman, Toine F. Cleophas, Eugene P. Cleophas, 2008-12-16 In clinical medicine appropriate statistics has become indispensable to evaluate treatment effects Randomized controlled trials are currently the only trials that truly provide evidence based medicine Evidence based medicine has become crucial to optimal treatment of patients We can define randomized controlled trials by using Christopher J Bulpitt s definition a carefully and ethically designed experiment which includes the provision of adequate and appropriate controls by a process of randomization so that precisely framed questions can be answered The answers given by randomized controlled trials constitute at present the way how patients should be clinically managed In the setup of such randomized trial one of the most important issues is the statistical basis The randomized trial will never work when the statistical grounds and analyses have not been clearly defined beforehand All endpoints should be clearly defined in order to perform appropriate power calculations Based on these power calculations the exact number of available patients can be calculated in order to have a sufficient quantity of individuals to have the predefined questions answered Therefore every clinical physician should be capable to understand the statistical basis of well performed clinical trials It is therefore a great pleasure that Drs T J Cleophas A H Zwinderman and T F Cleophas have published a book on statistical analysis of clinical trials The book entitled *Statistics Applied to Clinical Trials* is clearly written and makes complex issues in statistical analysis transparent **Clinical Trials** Duolao Wang, Ameet Bakhai, 2006 This book explains statistics specifically for a medically literate audience Readers gain not only an understanding of the basics of medical statistics but also a critical insight into how to review and evaluate clinical trial evidence *Clinical Trials - a Practical Approach Package 5V Set* Bohaychuk, 1999-09 **Clinical Trials in Neurology** Roberto Guilloff, 2001-05-05 *Clinical Trials in Neurology* comprehensively tackles the methodology and design of clinical trials in neurological disease A general section deals with the ethical aspects drug development and regulatory requirements basic trial designs and the statistics used A diseases section tackles specific aspects of disorders focusing on the relevant ethical issues outcome variables and experience with large multicentre trials **Pharmacovigilance: A Practical Approach** Thao Doan, Linda Scarazzini, Cheryl Renz, Fabio Lievano, Mondira Bhattacharya, 2018-07-31 Written by experts in the field of pharmacovigilance and patient safety this concise resource provides a succinct easy to digest overview of an increasingly critical area of medical safety Drs Thao Doan Fabio Lievano Mondira Bhattacharya and Linda Scarazzini provide essential information for health care professionals clinical researchers and regulators who need a comprehensive up to date source of information on the
